Enabling or disabling SNMP

You can enable or disable SNMP on your clusters by using System Manager. SNMP enables you to monitor the storage virtual machines (SVMs) in a cluster to avoid issues before they can occur and to prevent issues from occurring.

Steps

1. Click .
2. In the **Setup** pane, click **SNMP**.
3. In the **SNMP** window, click either **Enable** or **Disable**.

Editing SNMP information

You can use the Edit SNMP Settings dialog box in System Manager to update information about the storage system location and contact personnel, and to specify the SNMP communities of your system.

About this task

System Manager uses the SNMP protocols SNMPv1 and SNMPv2c and an SNMP community to discover storage systems.

Steps

1. Click .
2. In the **Setup** pane, click **SNMP**.
3. Click **Edit**.
4. In the **General** tab, specify the contact personnel information and location information for the storage system, and the SNMP communities.

The community name can be of 32 characters and must not contain the following special characters: , / : " ' |.

5. In the **SNMPv3** tab, do the following:
 - a. Click **Add** to add an SNMPv3 user.
 - b. Specify the username and modify the engine ID, if required.
 - c. Select the **Authentication Protocol** and enter your credentials.
 - d. Select the **Privacy Protocol** and enter your credentials.
 - e. Click **OK** to save the changes.

6. Click **OK**.
7. Verify the changes that you made to the SNMP settings in the **SNMP** window.

Enabling or disabling SNMP traps

SNMP traps enable you to monitor the health and state of the various components of your storage system. You can use the Edit SNMP Settings dialog box in System Manager to enable or disable SNMP traps on your storage system.

About this task

Although SNMP is enabled by default, SNMP traps are disabled by default.

Steps

1. Click .
2. In the **Setup** pane, click **SNMP**.
3. In the **SNMP** window, click **Edit**.
4. In the **Edit SNMP Settings** dialog box, select the **Trap hosts** tab, and then select or clear the **Enable traps** check box to enable or disable SNMP traps, respectively.
5. If you enable SNMP traps, add the host name or IP address of the hosts to which the traps are sent.
6. Click **OK**.

Testing the trap host configuration

You can use System Manager to test whether you have configured the trap host settings correctly.

Steps

1. Click .
2. In the **Setup** pane, click **SNMP**.
3. In the **SNMP** window, click **Test Trap Host**.
4. Click **OK**.

SNMP window

The SNMP window enables you to view the current SNMP settings for your system. You can also change your system's SNMP settings, enable SNMP protocols, and add trap hosts.

Command buttons

- **Enable/Disable**

Enables or disables SNMP.

- **Edit**

Opens the Edit SNMP Settings dialog box, which enables you to specify the SNMP communities for your storage system and enable or disable traps.

- **Test Trap Host**

Sends a test trap to all the configured hosts to check whether the test trap reaches all the hosts and whether the configurations for SNMP are set correctly.

- **Refresh**

Updates the information in the window.

Details

The details area displays the following information about the SNMP server and host traps for your storage system:

- **SNMP**

Displays whether SNMP is enabled or not.

- **Traps**

Displays if SNMP traps are enabled or not.

- **Location**

Displays the address of the SNMP server.

- **Contact**

Displays the contact details for the SNMP server.

- **Trap host IP Address**

Displays the IP addresses of the trap host.

- **Community Names**

Displays the community name of the SNMP server.

- **Security Names**

Displays the security style for the SNMP server.
