CN1610 switch migration

Migrate from CN1610 switches to Nexus 3132Q-V switches workflow

Follow these workflow steps to migrate your CN1610 switches to Cisco Nexus 3132Q-V switches.

Migration requirements

Review the requirements and example switch information for the migration process.

Prepare for migration

Prepare your CN1610 switches for migration to Nexus 3132Q-V switches.

Configure your ports

Configure your ports for migration to the new Nexus 3132Q-V switches.

Complete your migration

Complete you migration to the new Nexus 3132Q-V switches.

Migration requirements

Cisco Nexus 3132Q-V switches can be used as cluster switches in your AFF or FAS cluster. Cluster switches allow you to build ONTAP clusters with more than two nodes.

The procedure requires the use of both ONTAP commands and Cisco Nexus 3000 Series Switches commands; ONTAP commands are used unless otherwise indicated.

For more information, see:

- NetApp CN1601 and CN1610 description page
- Cisco Ethernet Switch description page
- Hardware Universe

CN1610 requirements

The following cluster switches are supported:

- NetApp CN1610
- Cisco Nexus 3132Q-V

The cluster switches support the following node connections:

- NetApp CN1610: ports 0/1 through 0/12 (10 GbE)
- Cisco Nexus 3132Q-V: ports e1/1-30 (40/100 GbE)

The cluster switches use the following inter-switch link (ISL) ports:

- NetApp CN1610: ports 0/13 through 0/16 (10 GbE)
- Cisco Nexus 3132Q-V: ports e1/31-32 (40/100 GbE)

The Hardware Universe contains information about supported cabling to Nexus 3132Q-V switches:

- Nodes with 10 GbE cluster connections require QSFP to SFP+ optical fiber breakout cables or QSFP to SFP+ copper breakout cables
- Nodes with 40/100 GbE cluster connections require supported QSFP/QSFP28 optical modules with optical fiber cables or QSFP/QSFP28 copper direct-attach cables

The appropriate ISL cabling is as follows:

- Beginning: For CN1610 to CN1610 (SFP+ to SFP+), four SFP+ optical fiber or copper direct-attach cables
- Interim: For CN1610 to Nexus 3132Q-V (QSFP to four SFP+ breakout), one QSFP to SFP+ optical fiber or copper breakout cable
- Final: For Nexus 3132Q-V to Nexus 3132Q-V (QSFP28 to QSFP28), two QSFP28 optical fiber or copper direct-attach cables

NetApp twinax cables are not compatible with Cisco Nexus 3132Q-V switches.

If your current CN1610 configuration uses NetApp twinax cables for cluster-node-to-switch connections or ISL connections and you want to continue using twinax in your environment, you need to procure Cisco twinax cables. Alternatively, you can use optical fiber cables for both the ISL connections and the cluster-node-to-switch connections.

About the examples used

The examples in this procedure describe replacing CN1610 switches with Cisco Nexus 3132Q-V switches. You can use these steps (with modifications) for other older Cisco switches.

The procedure also uses the following switch and node nomenclature:

- The command outputs might vary depending on different releases of ONTAP.
- The CN1610 switches to be replaced are CL1 and CL2.
- The Nexus 3132Q-V switches to replace the CN1610 switches are C1 and C2.
- n1 clus1 is the first cluster logical interface (LIF) connected to cluster switch 1 (CL1 or C1) for node n1.
- n1 clus2 is the first cluster LIF connected to cluster switch 2 (CL2 or C2) for node n1.
- n1_clus3 is the second LIF connected to cluster switch 2 (CL2 or C2) for node n1.
- n1_clus4 is the second LIF connected to cluster switch 1 (CL1 or C1) for node n1.
- The number of 10 GbE and 40/100 GbE ports are defined in the reference configuration files (RCFs) available on the Cisco® Cluster Network Switch Reference Configuration File Download page.
- The nodes are n1, n2, n3, and n4.

The examples in this procedure use four nodes:

- Two nodes use four 10 GbE cluster interconnect ports: e0a, e0b, e0c, and e0d.
- The other two nodes use two 40 GbE cluster interconnect ports: e4a and e4e.

The Hardware Universe lists the actual cluster ports on your platforms.

What's next?

Prepare for migration.

Prepare for migration from CN1610 switches to 3132Q-V switches

Follow these steps to prepare your CN1610 switches for migration to Cisco Nexus 3132Q-V switches.

Steps

1. If AutoSupport is enabled on this cluster, suppress automatic case creation by invoking an AutoSupport message:

```
system node autosupport invoke -node * -type all - message MAINT=xh
```

x is the duration of the maintenance window in hours.

The AutoSupport message notifies technical support of this maintenance task so that automatic case creation is suppressed during the maintenance window.

2. Display information about the devices in your configuration:

network device-discovery show

The following example displays how many cluster interconnect interfaces have been configured in each node for each cluster interconnect switch:

cluster::> network device-discovery show Local Discovered Port Device Node Interface Platform n1 /cdp e0a 0/1 CL1 CN1610 0/1 e0b CL2 CN1610 CL2 0/2 e0c CN1610 e0d CL1 0/2 CN1610 n2 /cdp e0a 0/3 CL1 CN1610 e0b CL2 0/3 CN1610 e0c CL2 0/4 CN1610 e0d CL1 0/4 CN1610 8 entries were displayed.

- 3. Determine the administrative or operational status for each cluster interface.
 - a. Display the cluster network port attributes:

network port show

The following example displays the network port attributes on a system:

```
cluster::*> network port show -role Cluster
      (network port show)
Node: n1
            Broadcast
                              Speed (Mbps) Health Ignore
Port IPspace Domain Link MTU Admin/Open Status Health
Status
_____
e0a cluster cluster up 9000 auto/10000
e0b cluster cluster up 9000 auto/10000
                    up 9000 auto/10000
e0c cluster cluster
e0d cluster cluster up 9000 auto/10000 -
Node: n2
                              Speed (Mbps) Health Ignore
           Broadcast
Port IPspace Domain Link MTU Admin/Open Status Health
Status
_____
e0a cluster cluster up 9000 auto/10000
e0b cluster cluster up 9000 auto/10000 e0c cluster cluster up 9000 auto/10000
e0d cluster cluster up 9000 auto/10000 -
8 entries were displayed.
```

b. Display information about the logical interfaces: + network interface show

The following example displays the general information about all of the LIFs on your system:

.	Logical	Status	Network	Current	Current
Is Vserver Home	Interface	Admin/Oper	Address/Mask	Node	Port
Cluster	111	/	10 10 0 1/04	1	- 0 -
true	ni_ciusi	up/up	10.10.0.1/24	n1	e0a
	n1_clus2	up/up	10.10.0.2/24	n1	e0b
true	n1_clus3	up/up	10.10.0.3/24	n1	e0c
true	n1_clus4	up/up	10.10.0.4/24	n1	e0d
true	n2_clus1	up/up	10.10.0.5/24	n2	e0a
true	n2_clus2	up/up	10.10.0.6/24	n2	e0b
true	n2_clus3	up/up	10.10.0.7/24	n2	e0c
true	n2_clus4	up/up	10.10.0.8/24	n2	e0d

c. Display information about the discovered cluster switches:

system cluster-switch show

The following example displays the cluster switches that are known to the cluster, along with their management IP addresses:

```
cluster::> system cluster-switch show
Switch
                              Type
                                             Address
Model
                              cluster-network 10.10.1.101
CL1
CN1610
     Serial Number: 01234567
      Is Monitored: true
            Reason:
  Software Version: 1.2.0.7
    Version Source: ISDP
CL2
                              cluster-network 10.10.1.102
CN1610
     Serial Number: 01234568
      Is Monitored: true
            Reason:
  Software Version: 1.2.0.7
    Version Source: ISDP
2 entries were displayed.
```

4. Set the -auto-revert parameter to false on cluster LIFs clus1 and clus4 on both nodes:

network interface modify

Show example

```
cluster::*> network interface modify -vserver node1 -lif clus1 -auto
-revert false
cluster::*> network interface modify -vserver node1 -lif clus4 -auto
-revert false
cluster::*> network interface modify -vserver node2 -lif clus1 -auto
-revert false
cluster::*> network interface modify -vserver node2 -lif clus4 -auto
-revert false
```

Verify that the appropriate RCF and image are installed on the new 3132Q-V switches as necessary for your requirements, and make any essential site customizations, such as users and passwords, network addresses, and so on.

You must prepare both switches at this time. If you need to upgrade the RCF and image, follow these steps:

- a. See the Cisco Ethernet Switches page on NetApp Support Site.
- b. Note your switch and the required software versions in the table on that page.
- c. Download the appropriate version of the RCF.
- d. Select **CONTINUE** on the **Description** page, accept the license agreement, and then follow the instructions on the **Download** page to download the RCF.
- e. Download the appropriate version of the image software.

Cisco® Cluster and Management Network Switch Reference Configuration File Download

6. Migrate the LIFs associated with the second CN1610 switch to be replaced:

network interface migrate

You must migrate the cluster LIFs from a connection to the node, either through the service processor or node management interface, which owns the cluster LIF being migrated.

Show example

The following example shows n1 and n2, but LIF migration must be done on all the nodes:

```
cluster::*> network interface migrate -vserver Cluster -lif n1_clus2
-destination-node n1 -destination-port e0a
cluster::*> network interface migrate -vserver Cluster -lif n1_clus3
-destination-node n1 -destination-port e0d
cluster::*> network interface migrate -vserver Cluster -lif n2_clus2
-destination-node n2 -destination-port e0a
cluster::*> network interface migrate -vserver Cluster -lif n2_clus3
-destination-node n2 -destination-port e0d
```

7. Verify the cluster's health:

network interface show

The following example shows the result of the previous ${\tt network}$ interface ${\tt migrate}$ command:

(network interface show)									
Vserver Home	Logical Interface		Network Address/Mask			Is			
Cluster	n1_clus1	up/up	10.10.0.1/24	n1	e0a				
true false	n1_clus2	up/up	10.10.0.2/24	n1	e0a				
false	n1_clus3	up/up	10.10.0.3/24	n1	e0d				
true	n1_clus4	up/up	10.10.0.4/24	n1	e0d				
true	n2_clus1	up/up	10.10.0.5/24	n2	e0a				
false	n2_clus2	up/up	10.10.0.6/24	n2	e0a				
false	n2_clus3	up/up	10.10.0.7/24	n2	e0d				
true	n2_clus4	up/up	10.10.0.8/24	n2	e0d				

8. Shut down the cluster interconnect ports that are physically connected to switch CL2:

network port modify

The following commands shut down the specified ports on n1 and n2, but the ports must be shut down on all nodes:

```
cluster::*> network port modify -node n1 -port e0b -up-admin false
cluster::*> network port modify -node n1 -port e0c -up-admin false
cluster::*> network port modify -node n2 -port e0b -up-admin false
cluster::*> network port modify -node n2 -port e0c -up-admin false
```

9. Verify the connectivity of the remote cluster interfaces:

ONTAP 9.9.1 and later

You can use the network interface check cluster-connectivity command to start an accessibility check for cluster connectivity and then display the details:

 $\hbox{network interface check cluster-connectivity start} \ \textbf{and} \ \hbox{network interface check cluster-connectivity show}$

cluster1::*> network interface check cluster-connectivity start

NOTE: Wait for a number of seconds before running the show command to display the details.

cluste	cluster1::*> network interface check cluster-connectivity show											
		Source	Destination	Packet								
Node	Date	LIF	LIF	Loss								
n1												
	3/5/2022 19:21:18 -06:00	n1_clus2	n1_clus1	none								
	3/5/2022 19:21:20 -06:00	n1_clus2	n2_clus2	none								
n2												
	3/5/2022 19:21:18 -06:00	n2_clus2	n1_clus1	none								
	3/5/2022 19:21:20 -06:00	n2_clus2	n1_clus2	none								

All ONTAP releases

For all ONTAP releases, you can also use the cluster ping-cluster -node <name> command to check the connectivity:

cluster ping-cluster -node <name>

```
cluster::*> cluster ping-cluster -node n1
Host is n1
Getting addresses from network interface table...
Cluster n1 clus1 n1 e0a 10.10.0.1
Cluster n1 clus2 n1
                       e0b
                              10.10.0.2
                       e0c 10.10.0.3

   Local 10.10.0.4 to Remote 10.10.0.8
Larger than PMTU communication succeeds on 16 path(s)
RPC status:
4 paths up, 0 paths down (tcp check)
4 paths up, 0 paths down (udp check)
```

10. Shut down the ISL ports 13 through 16 on the active CN1610 switch CL1:

The following example shows how to shut down ISL ports 13 through 16 on the CN1610 switch CL1:

```
(CL1)# configure
(CL1)(Config)# interface 0/13-0/16
(CL1)(Interface 0/13-0/16)# shutdown
(CL1)(Interface 0/13-0/16)# exit
(CL1)(Config)# exit
(CL1)#
```

11. Build a temporary ISL between CL1 and C2:

Show example

The following example builds a temporary ISL between CL1 (ports 13-16) and C2 (ports e1/24/1-4):

```
C2# configure
C2 (config) # interface port-channel 2
C2 (config-if) # switchport mode trunk
C2 (config-if) # spanning-tree port type network
C2 (config-if) # mtu 9216
C2 (config-if) # interface breakout module 1 port 24 map 10g-4x
C2 (config) # interface e1/24/1-4
C2 (config-if-range) # switchport mode trunk
C2 (config-if-range) # mtu 9216
C2 (config-if-range) # channel-group 2 mode active
C2 (config-if-range) # exit
C2 (config-if) # exit
```

What's next?

Configure your ports.

Configure your ports for migration from CN1610 switches to 3132Q-V switches

Follow these steps to configure your ports for migration from the CN1610 switches to the new Nexus 3132Q-V switches.

Steps

1. On all nodes, remove the cables that are attached to the CN1610 switch CL2.

With supported cabling, you must reconnect the disconnected ports on all of the nodes to the Nexus 3132Q-V switch C2.

2. Remove four ISL cables from ports 13 to 16 on the CN1610 switch CL1.

You must attach appropriate Cisco QSFP to SFP+ breakout cables connecting port 1/24 on the new Cisco 3132Q-V switch C2, to ports 13 to 16 on existing CN1610 switch CL1.

When reconnecting any cables to the new Cisco 3132Q-V switch, you must use either optical fiber or Cisco twinax cables.

3. To make the ISL dynamic, configure the ISL interface 3/1 on the active CN1610 switch to disable the static mode: no port-channel static

This configuration matches with the ISL configuration on the 3132Q-V switch C2 when the ISLs are brought up on both switches in step 11.

Show example

The following example shows the configuration of the ISL interface 3/1 using the no port-channel static command to make the ISL dynamic:

```
(CL1) # configure
(CL1) (Config) # interface 3/1
(CL1) (Interface 3/1) # no port-channel static
(CL1) (Interface 3/1) # exit
(CL1) (Config) # exit
(CL1) #
```

4. Bring up ISLs 13 through 16 on the active CN1610 switch CL1.

Show example

The following example illustrates the process of bringing up ISL ports 13 through 16 on the port-channel interface 3/1:

```
(CL1) # configure

(CL1) (Config) # interface 0/13-0/16,3/1

(CL1) (Interface 0/13-0/16,3/1) # no shutdown

(CL1) (Interface 0/13-0/16,3/1) # exit

(CL1) (Config) # exit

(CL1) #
```

5. Verify that the ISLs are up on the CN1610 switch CL1:

```
show port-channel
```

The "Link State" should be Up, "Type" should be Dynamic, and the "Port Active" column should be True for ports 0/13 to 0/16:

Show example

```
(CL1) # show port-channel 3/1
Channel Name..... ISL-LAG
Link State..... Up
Admin Mode..... Enabled
Type..... Dynamic
Load Balance Option..... 7
(Enhanced hashing mode)
    Device/
Mbr
             Port
                    Port
Ports Timeout
             Speed
                    Active
0/13 actor/long 10 Gb Full True
   partner/long
0/14 actor/long
             10 Gb Full True
   partner/long
   actor/long
0/15
             10 Gb Full True
    partner/long
0/16
    actor/long
             10 Gb Full True
    partner/long
```

6. Verify that the ISLs are up on the 3132Q-V switch C2:

show port-channel summary

Ports Eth1/24/1 through Eth1/24/4 should indicate (P), meaning that all four ISL ports are up in the port-channel. Eth1/31 and Eth1/32 should indicate (D) as they are not connected:

```
C2# show port-channel summary
Flags: D - Down P - Up in port-channel (members)
       I - Individual H - Hot-standby (LACP only)
       s - Suspended r - Module-removed
       S - Switched R - Routed
       U - Up (port-channel)
       M - Not in use. Min-links not met
              Type Protocol Member Ports
Group Port-
     Channel
    Pol(SU)
              Eth
                      LACP
                               Eth1/31(D) Eth1/32(D)
    Po2(SU) Eth LACP Eth1/24/1(P) Eth1/24/2(P)
Eth1/24/3(P)
                                Eth1/24/4(P)
```

7. Bring up all of the cluster interconnect ports that are connected to the 3132Q-V switch C2 on all of the nodes:

network port modify

Show example

The following example shows how to bring up the cluster interconnect ports connected to the 3132Q-V switch C2:

```
cluster::*> network port modify -node n1 -port e0b -up-admin true
cluster::*> network port modify -node n1 -port e0c -up-admin true
cluster::*> network port modify -node n2 -port e0b -up-admin true
cluster::*> network port modify -node n2 -port e0c -up-admin true
```

8. Revert all of the migrated cluster interconnect LIFs that are connected to C2 on all of the nodes:

```
network interface revert
```

```
cluster::*> network interface revert -vserver Cluster -lif n1_clus2
cluster::*> network interface revert -vserver Cluster -lif n1_clus3
cluster::*> network interface revert -vserver Cluster -lif n2_clus2
cluster::*> network interface revert -vserver Cluster -lif n2_clus3
```

9. Verify that all of the cluster interconnect ports are reverted to their home ports:

network interface show

The following example shows that the LIFs on clus2 are reverted to their home ports, and shows that the LIFs are successfully reverted if the ports in the "Current Port" column have a status of true in the "Is Home" column. If the Is Home value is false, then the LIF is not reverted.

	Logical	Status	Network	Current	Current	Is
Vserver Home	Interface	Admin/Oper	Address/Mask	Node	Port	
Cluster						
true	n1_clus1	up/up	10.10.0.1/24	n1	e0a	
crue	n1_clus2	up/up	10.10.0.2/24	n1	e0b	
true	1 7 0	,	10 10 0 0 0 /04	4	0	
true	n1_clus3	up/up	10.10.0.3/24	n1	e0c	
	n1_clus4	up/up	10.10.0.4/24	n1	e0d	
true	n2 clus1	up/up	10.10.0.5/24	n2	e0a	
true	IIZ_CIUSI	αρ/ αρ	10.10.0.5/24	112	eua	
	n2_clus2	up/up	10.10.0.6/24	n2	e0b	
true	n2 clus3	up/up	10.10.0.7/24	n2	e0c	
true	_	1 . 1				
true	n2_clus4	up/up	10.10.0.8/24	n2	e0d	

10. Verify that all of the cluster ports are connected:

network port show

The following example shows the result of the previous network port modify command, verifying that all of the cluster interconnects are up:

```
cluster::*> network port show -role Cluster
     (network port show)
Node: n1
           Broadcast
                            Speed (Mbps) Health Ignore
Port IPspace Domain Link MTU Admin/Open
                                     Status Health
Status

```

11. Verify the connectivity of the remote cluster interfaces:

ONTAP 9.9.1 and later

You can use the network interface check cluster-connectivity command to start an accessibility check for cluster connectivity and then display the details:

 $\hbox{network interface check cluster-connectivity start} \ \textbf{and} \ \hbox{network interface check cluster-connectivity show}$

cluster1::*> network interface check cluster-connectivity start

NOTE: Wait for a number of seconds before running the show command to display the details.

cluste	cluster1::*> network interface check cluster-connectivity show											
		Source	Destination	Packet

4 paths up, 0 paths down (udp check)
```

12. On each node in the cluster, migrate the interfaces that are associated with the first CN1610 switch CL1,

to be replaced:

network interface migrate

Show example

The following example shows the ports or LIFs being migrated on nodes n1 and n2:

```
cluster::*> network interface migrate -vserver Cluster -lif n1_clus1
-destination-node n1 -destination-port e0b
cluster::*> network interface migrate -vserver Cluster -lif n1_clus4
-destination-node n1 -destination-port e0c
cluster::*> network interface migrate -vserver Cluster -lif n2_clus1
-destination-node n2 -destination-port e0b
cluster::*> network interface migrate -vserver Cluster -lif n2_clus4
-destination-node n2 -destination-port e0c
```

13. Verify the cluster status:

network interface show

The following example shows that the required cluster LIFs have been migrated to the appropriate cluster ports hosted on cluster switch C2:

	Logical	Status	Network	Current	Current	Is
Vserver Home	Interface	Admin/Oper	Address/Mask	Node	Port	
Cluster						
false	n1_clus1	up/up	10.10.0.1/24	n1	e0b	
	n1_clus2	up/up	10.10.0.2/24	n1	e0b	
true	n1_clus3	up/up	10.10.0.3/24	n1	e0c	
true	n1 clus4	up/up	10.10.0.4/24	n1	e0c	
false	111_01451	αρ/ αρ	10.10.0.1/21	111	202	
false	n2_clus1	up/up	10.10.0.5/24	n2	e0b	
raise	n2_clus2	up/up	10.10.0.6/24	n2	e0b	
true	n2 clus3	up/up	10.10.0.7/24	n2	e0c	
true		-F/ -F				
false	n2_clus4	up/up	10.10.0.8/24	n2	e0c	

14. Shut down the node ports that are connected to CL1 on all of the nodes:

network port modify

The following example shows how to shut down the specified ports on nodes n1 and n2:

```
cluster::*> network port modify -node n1 -port e0a -up-admin false
cluster::*> network port modify -node n1 -port e0d -up-admin false
cluster::*> network port modify -node n2 -port e0a -up-admin false
cluster::*> network port modify -node n2 -port e0d -up-admin false
```

15. Shut down the ISL ports 24, 31, and 32 on the active 3132Q-V switch C2:

shutdown

Show example

The following example shows how to shut down ISLs 24, 31, and 32 on the active 3132Q-V switch C2:

```
C2# configure
C2(config)# interface ethernet 1/24/1-4
C2(config-if-range)# shutdown
C2(config-if-range)# exit
C2(config)# interface ethernet 1/31-32
C2(config-if-range)# shutdown
C2(config-if-range)# exit
C2(config-if-range)# exit
C2(config)# exit
```

16. Remove the cables that are attached to the CN1610 switch CL1 on all of the nodes.

With supported cabling, you must reconnect the disconnected ports on all of the nodes to the Nexus 3132Q-V switch C1.

17. Remove the QSFP cables from Nexus 3132Q-V C2 port e1/24.

You must connect ports e1/31 and e1/32 on C1 to ports e1/31 and e1/32 on C2 using supported Cisco QSFP optical fiber or direct-attach cables.

18. Restore the configuration on port 24 and remove the temporary port-channel 2 on C2, by copying the running-configuration file to the startup-configuration file.

The following example copies the running-configuration file to the startup-configuration file:

19. Bring up ISL ports 31 and 32 on C2, the active 3132Q-V switch:

no shutdown

Show example

The following example shows how to bring up ISLs 31 and 32 on the 3132Q-V switch C2:

What's next?

Complete your migration.

Complete your migration from CN1610 switches to Nexus 3132Q-V switches

Complete the following steps to finalize the CN1610 switches migration to Nexus 3132Q-

V switches.

Steps

1. Verify that the ISL connections are up on the 3132Q-V switch C2:

```
show port-channel summary
```

Ports Eth1/31 and Eth1/32 should indicate (P), meaning that both the ISL ports are up in the port-channel.

Show example

2. Bring up all of the cluster interconnect ports connected to the new 3132Q-V switch C1 on all of the nodes:

```
network port modify
```

Show example

The following example shows how to bring up all of the cluster interconnect ports connected to the new 3132Q-V switch C1:

```
cluster::*> network port modify -node n1 -port e0a -up-admin true
cluster::*> network port modify -node n1 -port e0d -up-admin true
cluster::*> network port modify -node n2 -port e0a -up-admin true
cluster::*> network port modify -node n2 -port e0d -up-admin true
```

3. Verify the status of the cluster node port:

```
network port show
```

The following example verifies that all of the cluster interconnect ports on n1 and n2 on the new 3132Q-V switch C1 are up:

```
cluster::*> network port show -role Cluster
     (network port show)
Node: n1
                            Speed (Mbps) Health
           Broadcast
                                           Ignore
                            Admin/Open
           Domain Link MTU
                                     Status
                                            Health
Port IPspace
Status
e0a cluster cluster up
                       9000 auto/10000
e0b cluster cluster
                  up 9000 auto/10000
e0c cluster cluster up 9000 auto/10000
e0d cluster cluster up 9000 auto/10000
Node: n2
           Broadcast
                            Speed (Mbps) Health Ignore
           Domain Link MTU
                            Admin/Open Status
                                           Health
Port IPspace
Status
e0a cluster cluster up
                       9000 auto/10000
                       9000 auto/10000
e0b cluster cluster
                  up
eOc cluster cluster up
                       9000 auto/10000
e0d cluster cluster up
                       9000 auto/10000
8 entries were displayed.
```

4. Revert all of the migrated cluster interconnect LIFs that were originally connected to C1 on all of the nodes:

network interface revert

The following example shows how to revert the migrated cluster LIFs to their home ports:

```
cluster::*> network interface revert -vserver Cluster -lif n1_clus1
cluster::*> network interface revert -vserver Cluster -lif n1_clus4
cluster::*> network interface revert -vserver Cluster -lif n2_clus1
cluster::*> network interface revert -vserver Cluster -lif n2_clus4
```

5. Verify that the interface is now home:

network interface show

The following example shows the status of cluster interconnect interfaces is up and Is home for n1 and n2:

	Logical	Status	Network	Current	Current Is
Vserver Home	Interface	Admin/Oper	Address/Mask	Node	Port
Cluster					
	n1_clus1	up/up	10.10.0.1/24	n1	e0a
true	n1_clus2	up/up	10.10.0.2/24	n1	e0b
true true	n1_clus3	up/up	10.10.0.3/24	n1	e0c
	n1_clus4	up/up	10.10.0.4/24	n1	e0d
true	n2_clus1	up/up	10.10.0.5/24	n2	e0a
true	n2_clus2	up/up	10.10.0.6/24	n2	e0b
true	n2_clus3	up/up	10.10.0.7/24	n2	e0c
true true	n2_clus4	up/up	10.10.0.8/24	n2	e0d

6. Verify the connectivity of the remote cluster interfaces:

ONTAP 9.9.1 and later

You can use the network interface check cluster-connectivity command to start an accessibility check for cluster connectivity and then display the details:

 $\hbox{network interface check cluster-connectivity start} \ \textbf{and} \ \hbox{network interface check cluster-connectivity show}$

cluster1::*> network interface check cluster-connectivity start

NOTE: Wait for a number of seconds before running the show command to display the details.

cluste	cluster1::*> network interface check cluster-connectivity show											
		Source	Destination	Packet

7. Expand the cluster by adding nodes to the Nexus 3132Q-V cluster switches.

8. Display the information about the devices in your configuration:

- ° network device-discovery show
- $^{\circ}$ network port show -role cluster
- ° network interface show -role cluster
- ° system cluster-switch show

The following examples show nodes n3 and n4 with 40 GbE cluster ports connected to ports e1/7 and e1/8, respectively on both the Nexus 3132Q-V cluster switches, and both nodes have joined the cluster. The 40 GbE cluster interconnect ports used are e4a and e4e.

	Local	Discovered

cluster::> system cluster-switch show Type Address Model cluster-network 10.10.1.103 C1 NX3132V Serial Number: FOX00001 Is Monitored: true Reason: Software Version: Cisco Nexus Operating System (NX-OS) Software, Version 7.0(3) I4(1) Version Source: CDP C2 cluster-network 10.10.1.104 NX3132V Serial Number: FOX000002 Is Monitored: true Reason: Software Version: Cisco Nexus Operating System (NX-OS) Software, Version 7.0(3) I4(1) Version Source: CDP cluster-network 10.10.1.101 CN1610 CL1 Serial Number: 01234567 Is Monitored: true Reason: Software Version: 1.2.0.7 Version Source: ISDP CL2 cluster-network 10.10.1.102 CN1610 Serial Number: 01234568 Is Monitored: true Reason: Software Version: 1.2.0.7 Version Source: ISDP 4 entries were displayed.

9. Remove the replaced CN1610 switches if they are not automatically removed:

system cluster-switch delete

The following example shows how to remove the CN1610 switches:

```
cluster::> system cluster-switch delete -device CL1
cluster::> system cluster-switch delete -device CL2
```

10. Configure clusters clus1 and clus4 to -auto-revert on each node and confirm:

Show example

```
cluster::*> network interface modify -vserver node1 -lif clus1 -auto
-revert true
cluster::*> network interface modify -vserver node1 -lif clus4 -auto
-revert true
cluster::*> network interface modify -vserver node2 -lif clus1 -auto
-revert true
cluster::*> network interface modify -vserver node2 -lif clus4 -auto
-revert true
```

11. Verify that the proper cluster switches are monitored:

```
system cluster-switch show
```

```
cluster::> system cluster-switch show
                           Type
                                     Address
Switch
Model
C1
                           cluster-network 10.10.1.103
NX3132V
    Serial Number: FOX00001
     Is Monitored: true
           Reason:
 Software Version: Cisco Nexus Operating System (NX-OS) Software,
Version
                   7.0(3) I4(1)
   Version Source: CDP
                           cluster-network 10.10.1.104
C2
NX3132V
    Serial Number: FOX000002
     Is Monitored: true
           Reason:
 Software Version: Cisco Nexus Operating System (NX-OS) Software,
Version
                   7.0(3) I4(1)
   Version Source: CDP
2 entries were displayed.
```

12. If you suppressed automatic case creation, reenable it by invoking an AutoSupport message:

system node autosupport invoke -node * -type all -message MAINT=END

What's next?

Configure switch health monitoring.
