Install or upgrade the RCF

Install or upgrade the Reference Configuration File (RCF) overview

You install the Reference Configuration File (RCF) after setting up the Nexus 9336C-FX2 switch for the first time. You upgrade your RCF version when you have an existing version of the RCF file installed on your switch.

Available RCF configurations

The following table describes the RCFs available for different configurations. Choose the RCF applicable to your configuration.

For specific port and VLAN usage details, refer to the banner and important notes section in your RCF.

RCF name	Description
2-Cluster-HA-Breakout	Supports two ONTAP clusters with at least eight nodes, including nodes that use shared Cluster+HA ports.
4-Cluster-HA-Breakout	Supports four ONTAP clusters with at least four nodes, including nodes that use shared Cluster+HA ports.
1-Cluster-HA	All ports are configured for 40/100GbE. Supports shared cluster/HA traffic on ports. Required for AFF A320, AFF A250, and FAS500f systems. Additionally, all ports can be used as dedicated cluster ports.
1-Cluster-HA-Breakout	Ports are configured for 4x10GbE breakout, 4x25GbE breakout (RCF 1.6+ on 100GbE switches), and 40/100GbE. Supports shared cluster/HA traffic on ports for nodes that use shared cluster/HA ports: AFF A320, AFF A250, and FAS500f systems. Additionally, all ports can be used as dedicated cluster ports.
Cluster-HA-Storage	Ports are configured for 40/100GbE for Cluster+HA, 4x10GbE breakout for Cluster and 4x25GbE breakout for Cluster+HA, and 100GbE for each Storage HA Pair.
Cluster	Two flavors of RCF with different allocations of 4x10GbE ports (breakout) and 40/100GbE ports. All FAS/AFF nodes are supported, except for AFF A320, AFF A250, and FAS500f systems.
Storage	All ports are configured for 100GbE NVMe storage connections.

Suggested documentation

Cisco Ethernet Switches (NSS)

Consult the switch compatibility table for the supported ONTAP and RCF versions on the NetApp Support Site. Note that there can be command dependencies between the command syntax in the RCF and the

syntax found in specific versions of NX-OS.

Cisco Nexus 3000 Series Switches

Refer to the appropriate software and upgrade guides available on the Cisco website for complete documentation on the Cisco switch upgrade and downgrade procedures.

About the examples

The examples in this procedure use the following switch and node nomenclature:

- The names of the two Cisco switches are cs1 and cs2.
- The node names are cluster1-01, cluster1-02, cluster1-03, and cluster1-04.
- The cluster LIF names are cluster1-01_clus1, cluster1-01_clus2, cluster1-02_clus1, cluster1-02_clus2, cluster1-03_clus1, cluster1-03_clus2, cluster1-04_clus1, and cluster1-04_clus2.
- The cluster1::*> prompt indicates the name of the cluster.

The examples in this procedure use four nodes. These nodes use two 10GbE cluster interconnect ports **e0a** and **e0b**. See the Hardware Universe to verify the correct cluster ports on your platforms.

The command outputs might vary depending on different releases of ONTAP.

For details of the available RCF configurations, see Software install workflow.

Commands used

The procedure requires the use of both ONTAP commands and Cisco Nexus 9000 Series Switches commands; ONTAP commands are used unless otherwise indicated.

What's next?

Install the RCF or Upgrade your RCF.

Install the Reference Configuration File (RCF)

You install the Reference Configuration File (RCF) after setting up the Nexus 9336C-FX2 switch for the first time.

Before you begin

Verify the following installations and connections:

- A console connection to the switch. The console connection is optional if you have remote access to the switch.
- Switch cs1 and switch cs2 are powered up and the initial switch setup is complete (the Management IP address and SSH is setup).
- The desired NX-OS version has been installed.
- ISL connections between switches are connected.
- ONTAP node cluster ports are not connected.

Step 1: Install the RCF on the switches

- 1. Login to switch cs1 using SSH or by using a serial console.
- 2. Copy the RCF to the bootflash of switch cs1 using one of the following transfer protocols: FTP, TFTP, SFTP, or SCP.

For more information on Cisco commands, see the appropriate guide in the Cisco Nexus 9000 Series NX-OS Command Reference guides.

Show example

This example shows TFTP being used to copy an RCF to the bootflash on switch cs1:

csl# copy tftp: bootflash: vrf management Enter source filename: Nexus_9336C_RCF_v1.6-Cluster-HA-Breakout.txt Enter hostname for the tftp server: 172.22.201.50 Trying to connect to tftp server....Connection to Server Established. TFTP get operation was successful Copy complete, now saving to disk (please wait)...

3. Apply the RCF previously downloaded to the bootflash.

For more information on Cisco commands, see the appropriate guide in the Cisco Nexus 9000 Series NX-OS Command Reference guides.

Show example

This example shows the RCF file Nexus_9336C_RCF_v1.6-Cluster-HA-Breakout.txt being installed on switch cs1:

cs1# copy Nexus_9336C_RCF_v1.6-Cluster-HA-Breakout.txt runningconfig echo-commands

4. Examine the banner output from the show banner motd command. You must read and follow these instructions to ensure the proper configuration and operation of the switch.

```
cs1# show banner motd
*******
* NetApp Reference Configuration File (RCF)
*
* Switch : Nexus N9K-C9336C-FX2
* Filename : Nexus 9336C RCF v1.6-Cluster-HA-Breakout.txt
* Date : 10-23-2020
* Version : v1.6
*
* Port Usage:
* Ports 1- 3: Breakout mode (4x10G) Intra-Cluster Ports, int
e1/1/1-4, e1/2/1-4
, e1/3/1-4
* Ports 4- 6: Breakout mode (4x25G) Intra-Cluster/HA Ports, int
e1/4/1-4, e1/5/
1-4, e1/6/1-4
* Ports 7-34: 40/100GbE Intra-Cluster/HA Ports, int e1/7-34
* Ports 35-36: Intra-Cluster ISL Ports, int e1/35-36
* Dynamic breakout commands:
* 10G: interface breakout module 1 port <range> map 10g-4x
* 25G: interface breakout module 1 port <range> map 25g-4x
* Undo breakout commands and return interfaces to 40/100G
configuration in confi
g mode:
* no interface breakout module 1 port <range> map 10g-4x
* no interface breakout module 1 port <range> map 25g-4x
* interface Ethernet <interfaces taken out of breakout mode>
* inherit port-profile 40-100G
* priority-flow-control mode auto
* service-policy input HA
* exit
*******
```

5. Verify that the RCF file is the correct newer version:

```
show running-config
```

When you check the output to verify you have the correct RCF, make sure that the following information is correct:

- The RCF banner
- The node and port settings
- Customizations

The output varies according to your site configuration. Check the port settings and refer to the release notes for any changes specific to the RCF that you have installed.

- 6. Reapply any previous customizations to the switch configuration. Refer to Review cabling and configuration considerations for details of any further changes required.
- 7. After you verify the RCF versions and switch settings are correct, copy the running-config file to the startupconfig file.

```
copy running-config startup-config
```

Show example

For more information on Cisco commands, see the appropriate guide in the Cisco Nexus 9000 Series NX-OS Command Reference.

8. Reboot switch cs1.

```
cs1# reload
```

This command will reboot the system. (y/n)? [n] ${\boldsymbol{y}}$

- 9. Repeat steps 1 through 7 on switch cs2.
- 10. Connect the cluster ports of all nodes in the ONTAP cluster to switches cs1 and cs2.

Step 2: Verify the switch connections

1. Verify that the switch ports connected to the cluster ports are **up**.

```
show interface brief
```

```
cs1# show interface brief | grep up
•
.
Eth1/1/1 1 eth access up
                              none
10G(D) --
Eth1/1/2
          1 eth access up
                              none
10G(D) --
Eth1/7
          1 eth trunk up
                              none
100G(D) --
       1 eth trunk up
Eth1/8
                               none
100G(D) --
•
•
```

2. Verify that the cluster nodes are in their correct cluster VLANs using the following commands:

show vlan brief

show interface trunk

Show example

cs1# show vlan brief VLAN Name Status Ports _____ _____ 1 default active Pol, Eth1/1, Eth1/2, Eth1/3 Eth1/4, Eth1/5, Eth1/6, Eth1/7 Eth1/8, Eth1/35, Eth1/36 Eth1/9/1, Eth1/9/2, Eth1/9/3 Eth1/9/4, Eth1/10/1, Eth1/10/2 Eth1/10/3, Eth1/10/4 17 VLAN0017 Eth1/1, Eth1/2, active Eth1/3, Eth1/4 Eth1/5, Eth1/6, Eth1/7, Eth1/8 Eth1/9/1, Eth1/9/2, Eth1/9/3 Eth1/9/4, Eth1/10/1, Eth1/10/2 Eth1/10/3, Eth1/10/4 18 VLAN0018 active Eth1/1, Eth1/2, Eth1/3, Eth1/4 Eth1/5, Eth1/6, Eth1/7, Eth1/8 Eth1/9/1, Eth1/9/2, Eth1/9/3 Eth1/9/4, Eth1/10/1, Eth1/10/2 Eth1/10/3, Eth1/10/4 Eth1/11, Eth1/12, 31 VLAN0031 active Eth1/13 Eth1/14, Eth1/15, Eth1/16 Eth1/17, Eth1/18, Eth1/19 Eth1/20, Eth1/21, Eth1/22 32 VLAN0032 active Eth1/23, Eth1/24, Eth1/25

	•••		

For specific port and VLAN usage details, refer to the banner and important notes section in your RCF.

3. Verify that the ISL between cs1 and cs2 is functional:

show port-channel summary

```
cs1# show port-channel summary
Flags: D - Down
              P - Up in port-channel (members)
      I - Individual H - Hot-standby (LACP only)
      s - Suspended r - Module-removed
      b - BFD Session Wait
      S - Switched R - Routed
      U - Up (port-channel)
      p - Up in delay-lacp mode (member)
      M - Not in use. Min-links not met
_____
             Type Protocol Member Ports Channel
Group Port-
_____
1
    Po1(SU) Eth LACP Eth1/35(P) Eth1/36(P)
cs1#
```

Step 3: Set up your ONTAP cluster

NetApp recommends that you use System Manager to set up new clusters.

System Manager provides a simple and easy workflow for cluster set up and configuration including assigning a node management IP address, initializing the cluster, creating a local tier, configuring protocols and provisioning initial storage.

Go to Configure ONTAP on a new cluster with System Manager for setup instructions.

What's next?

Verify SSH configuration.

Upgrade you Reference Configuration File (RCF)

You upgrade your RCF version when you have an existing version of the RCF file installed on your operational switches.

Before you begin

Make sure you have the following:

- A current backup of the switch configuration.
- A fully functioning cluster (no errors in the logs or similar issues).
- The current RCF.
- If you are updating your RCF version, you need a boot configuration in the RCF that reflects the desired boot images.

If you need to change the boot configuration to reflect the current boot images, you must do so before reapplying the RCF so that the correct version is instantiated on future reboots.

No operational inter-switch link (ISL) is needed during this procedure. This is by design because RCF version changes can affect ISL connectivity temporarily. To ensure non-disruptive cluster operations, the following procedure migrates all of the cluster LIFs to the operational partner switch while performing the steps on the target switch.

Before installing a new switch software version and RCFs, you must erase the switch settings and perform basic configuration. You must be connected to the switch using the serial console or have preserved basic configuration information prior to erasing the switch settings.

Step 1: Prepare for the upgrade

1. Display the cluster ports on each node that are connected to the cluster switches:

network device-discovery show

Show example

```
cluster1::*> network device-discovery show

  Software Version: Cisco Nexus Operating System (NX-OS)
Software, Version
                   9.3(5)
   Version Source: CDP
cluster1::*>
```

3. Disable auto-revert on the cluster LIFs.

cluster1::*> network interface modify -vserver Cluster -lif * -auto-revert
false

Step 2: Configure ports

1. On cluster switch cs1, shut down the ports connected to the cluster ports of the nodes.

```
cs1(config) # interface eth1/1/1-2,eth1/7-8
```

```
cs1(config-if-range) # shutdown
```

Make sure to shutdown **all** connected cluster ports to avoid any network connection issues. See the Knowledge Base article Node out of quorum when migrating cluster LIF during switch OS upgrade for further details. 2. Verify that the cluster LIFs have failed over to the ports hosted on cluster switch cs1. This might take a few seconds.

network interface show -role cluster

```
Show example
```

<pre>cluster1::*> network interface show -role cluster</pre>						
	Logical	Status	Network	Current		
Current Is						
Vserver	Interface	Admin/Oper	Address/Mask	Node		
Port Home	e					
Cluster						
	cluster1-01_clus1	up/up	169.254.3.4/23			
cluster1-01	e0a true					
	cluster1-01_clus2	up/up	169.254.3.5/23			
cluster1-01	e0a false					
	cluster1-02_clus1	up/up	169.254.3.8/23			
cluster1-02	e0a true					
	cluster1-02_clus2	up/up	169.254.3.9/23			
cluster1-02	e0a false					
	cluster1-03_clus1	up/up	169.254.1.3/23			
cluster1-03	e0a true					
	cluster1-03_clus2	up/up	169.254.1.1/23			
cluster1-03	e0a false					
	cluster1-04_clus1	up/up	169.254.1.6/23			
cluster1-04	e0a true					
	cluster1-04_clus2	up/up	169.254.1.7/23			
cluster1-04	e0a false					
8 entries we	ere displayed.					
cluster1::*>	>					

3. Verify that the cluster is healthy:

cluster show

```
cluster1::*> cluster show
                  Health Eligibility
Node
                                      Epsilon
----- -----
                                      _____
cluster1-01
                                      false
                  true
                         true
cluster1-02
                                      false
                  true
                         true
cluster1-03
                                      true
                  true
                         true
cluster1-04
                                      false
                  true
                         true
4 entries were displayed.
cluster1::*>
```

If you have not already done so, save a copy of the current switch configuration by copying the output of the following command to a text file:

show running-config

- a. Record any custom additions between the current running-config and the RCF file in use (such as an SNMP configuration for your organization).
- b. For NX-OS 10.2 and newer use the show diff running-config command to compare with the saved RCF file in the bootflash. Otherwise, use a third part diff/compare tool.
- 5. Save basic configuration details to the write erase.cfg file on the bootflash.

switch# show run | i "username admin password" > bootflash:write_erase.cfg
switch# show run | section "vrf context management" >>
bootflash:write_erase.cfg
switch# show run | section "interface mgmt0" >> bootflash:write_erase.cfg

switch# show run | section "switchname" >> bootflash:write erase.cfg

6. Issue the write erase command to erase the current saved configuration:

switch# write erase

Warning: This command will erase the startup-configuration.

Do you wish to proceed anyway? (y/n) [n] y

7. Copy the previously saved basic configuration into the startup configuration.

switch# copy write erase.cfg startup-config

8. Perform a reboot of the switch:

switch# reload

This command will reboot the system. (y/n)? [n] y

9. After the management IP address is reachable again, log in to the switch through SSH.

You may need to update host file entries related to the SSH keys.

10. Copy the RCF to the bootflash of switch cs1 using one of the following transfer protocols: FTP, TFTP, SFTP, or SCP.

For more information on Cisco commands, see the appropriate guide in the Cisco Nexus 9000 Series NX-OS Command Reference guides.

Show example

This example shows TFTP being used to copy an RCF to the bootflash on switch cs1:

```
csl# copy tftp: bootflash: vrf management
Enter source filename: Nexus_9336C_RCF_v1.6-Cluster-HA-Breakout.txt
Enter hostname for the tftp server: 172.22.201.50
Trying to connect to tftp server.....Connection to Server
Established.
TFTP get operation was successful
Copy complete, now saving to disk (please wait)...
```

11. Apply the RCF previously downloaded to the bootflash.

For more information on Cisco commands, see the appropriate guide in the Cisco Nexus 9000 Series NX-OS Command Reference guides.

Show example

This example shows the RCF file Nexus_9336C_RCF_v1.6-Cluster-HA-Breakout.txt being installed on switch cs1:

cs1# copy Nexus_9336C_RCF_v1.6-Cluster-HA-Breakout.txt runningconfig echo-commands

12. Examine the banner output from the show banner motd command. You must read and follow these instructions to ensure the proper configuration and operation of the switch.

```
cs1# show banner motd
*******
* NetApp Reference Configuration File (RCF)
*
* Switch : Nexus N9K-C9336C-FX2
* Filename : Nexus 9336C RCF v1.6-Cluster-HA-Breakout.txt
* Date : 10-23-2020
* Version : v1.6
*
* Port Usage:
* Ports 1- 3: Breakout mode (4x10G) Intra-Cluster Ports, int
e1/1/1-4, e1/2/1-4
, e1/3/1-4
* Ports 4- 6: Breakout mode (4x25G) Intra-Cluster/HA Ports, int
e1/4/1-4, e1/5/
1-4, e1/6/1-4
* Ports 7-34: 40/100GbE Intra-Cluster/HA Ports, int e1/7-34
* Ports 35-36: Intra-Cluster ISL Ports, int e1/35-36
* Dynamic breakout commands:
* 10G: interface breakout module 1 port <range> map 10g-4x
* 25G: interface breakout module 1 port <range> map 25g-4x
* Undo breakout commands and return interfaces to 40/100G
configuration in confi
g mode:
* no interface breakout module 1 port <range> map 10g-4x
* no interface breakout module 1 port <range> map 25g-4x
* interface Ethernet <interfaces taken out of breakout mode>
* inherit port-profile 40-100G
* priority-flow-control mode auto
* service-policy input HA
* exit
*******
```

13. Verify that the RCF file is the correct newer version:

```
show running-config
```

When you check the output to verify you have the correct RCF, make sure that the following information is correct:

- The RCF banner
- The node and port settings
- Customizations

The output varies according to your site configuration. Check the port settings and refer to the release notes for any changes specific to the RCF that you have installed.

- 14. Reapply any previous customizations to the switch configuration. Refer to Review cabling and configuration considerations for details of any further changes required.
- 15. After you verify the RCF versions, custom additions, and switch settings are correct, copy the runningconfig file to the startup-config file.

For more information on Cisco commands, see the appropriate guide in the Cisco Nexus 9000 Series NX-OS Command Reference guides.

cs1# copy running-config startup-config

[] 100% Copy complete

16. Reboot switch cs1. You can ignore the "cluster switch health monitor" alerts and "cluster ports down" events reported on the nodes while the switch reboots.

cs1# **reload**

This command will reboot the system. (y/n)? [n] **y**

- 17. Verify the health of cluster ports on the cluster.
 - a. Verify that cluster ports are up and healthy across all nodes in the cluster:

network port show -role cluster

```
cluster1::*> network port show -role cluster
Node: cluster1-01
Ignore
                                  Speed(Mbps)

2 entries were displayed.
```

You might observe the following output on the cs1 switch console depending on the RCF version previously loaded on the switch:

```
2020 Nov 17 16:07:18 cs1 %$ VDC-1 %$ %STP-2-UNBLOCK_CONSIST_PORT:
Unblocking port port-channel1 on VLAN0092. Port consistency
restored.
2020 Nov 17 16:07:23 cs1 %$ VDC-1 %$ %STP-2-BLOCK_PVID_PEER:
Blocking port-channel1 on VLAN0001. Inconsistent peer vlan.
2020 Nov 17 16:07:23 cs1 %$ VDC-1 %$ %STP-2-BLOCK_PVID_LOCAL:
Blocking port-channel1 on VLAN0092. Inconsistent local vlan.
```

18. Verify that the cluster is healthy:

cluster show

Show example

```
cluster1::*> cluster show
Node
              Health Eligibility Epsilon
_____ _ ____
cluster1-01
              true true
                              false
                    true
cluster1-02
              true
                              false
              true true
cluster1-03
                              true
cluster1-04
                    true
                              false
              true
4 entries were displayed.
cluster1::*>
```

- 19. Repeat steps 1 to 18 on switch cs2.
- 20. Enable auto-revert on the cluster LIFs.

cluster1::*> network interface modify -vserver Cluster -lif * -auto-revert
True

Step 3: Verify the cluster network configuration and cluster health

1. Verify that the switch ports connected to the cluster ports are **up**.

show interface brief

Show example

```
cs1# show interface brief | grep up
•
•
Eth1/1/1
           1
                  eth access up
                                  none
10G(D) --
Eth1/1/2 1 eth access up
                                  none
10G(D) --
Eth1/7
                  eth trunk up
           1
                                  none
100G(D) --
Eth1/8
           1
                  eth trunk up
                                  none
100G(D) --
•
•
```

2. Verify that the expected nodes are still connected:

show cdp neighbors

cs1# show cdp neighbors					
Capability Codes: Bridge	R - Router, T -	Trans-	Bridge, B -	Source-Route-	
	S - Switch, H - V - VoIP-Phone, s - Supports-ST	Host, D - Re P-Dispu	I - IGMP, r motely-Manag te	- Repeater, red-Device,

cluster1-04
8 entries were displayed.
cluster1::*>
```

If any cluster LIFs have not returned to their home ports, revert them manually from the local node:

network interface revert -vserver vserver_name -lif lif_name

6. Verify that the cluster is healthy:

cluster show

```
cluster1::*> cluster show
Node
               Health Eligibility Epsilon
----- -----
cluster1-01
              true true
true true
                               false
cluster1-02
                               false
cluster1-03
               true
                    true
                               true
cluster1-04 true true false
4 entries were displayed.
cluster1::*>
```

7. Verify the connectivity of the remote cluster interfaces:

ONTAP 9.9.1 and later

You can use the network interface check cluster-connectivity command to start an accessibility check for cluster connectivity and then display the details:

network interface check cluster-connectivity start and network interface check cluster-connectivity show

cluster1::*> network interface check cluster-connectivity start

NOTE: Wait for a number of seconds before running the show command to display the details.

<pre>cluster1::*> network interface check cluster-connectivity show</pre>					
				Source	Destination
Packet					
Node	Date			LIF	LIF
Loss					
node1					
	3/5/2022	19:21:18	-06:00	cluster1-01_clus2	cluster1-02-
clus1	none				
	3/5/2022	19:21:20	-06:00	cluster1-01_clus2	cluster1-
02_clus2 none					
node2					
	3/5/2022	19:21:18	-06:00	cluster1-02_clus2	cluster1-
01_clus1 none					
	3/5/2022	19:21:20	-06:00	cluster1-02_clus2	cluster1-
01_clus	s2 none				

All ONTAP releases

For all ONTAP releases, you can also use the cluster ping-cluster -node <name> command to check the connectivity:

cluster ping-cluster -node <name>

```
cluster1::*> cluster ping-cluster -node local
