

# **Restore files from Snapshot copies**

ONTAP 9

NetApp  
September 18, 2024

# Table of Contents

- Restore files from Snapshot copies ..... 1
  - Restore a file from a Snapshot copy on an NFS or SMB client ..... 1
  - Enable and disable NFS and SMB client access to Snapshot copy directory ..... 1
  - Restore a single file from a Snapshot copy ..... 3
  - Restore part of a file from a Snapshot copy ..... 4
  - Restore the contents of a volume from a Snapshot copy ..... 5

# Restore files from Snapshot copies

## Restore a file from a Snapshot copy on an NFS or SMB client

A user on an NFS or SMB client can restore a file directly from a Snapshot copy without the intervention of a storage system administrator.

Every directory in the file system contains a subdirectory named `.snapshot` accessible to NFS and SMB users. The `.snapshot` subdirectory contains subdirectories corresponding to the Snapshot copies of the volume:

```
$ ls .snapshot
daily.2017-05-14_0013/      hourly.2017-05-15_1106/
daily.2017-05-15_0012/      hourly.2017-05-15_1206/
hourly.2017-05-15_1006/      hourly.2017-05-15_1306/
```

Each subdirectory contains the files referenced by the Snapshot copy. If users accidentally delete or overwrite a file, they can restore the file to the parent read-write directory by copying the file from the Snapshot subdirectory to the read-write directory:

```
$ ls my.txt
ls: my.txt: No such file or directory
$ ls .snapshot
daily.2017-05-14_0013/      hourly.2017-05-15_1106/
daily.2017-05-15_0012/      hourly.2017-05-15_1206/
hourly.2017-05-15_1006/      hourly.2017-05-15_1306/
$ ls .snapshot/hourly.2017-05-15_1306/my.txt
my.txt
$ cp .snapshot/hourly.2017-05-15_1306/my.txt .
$ ls my.txt
my.txt
```

## Enable and disable NFS and SMB client access to Snapshot copy directory

You can enable and disable access to the Snapshot copy directory using the ONTAP CLI `-snapdir-access` option of the `volume modify` command, and beginning with ONTAP 9.10.1, you can use System Manager to enable or disable client systems to access to a Snapshot copy directory on a volume. Enabling access makes the Snapshot copy directory visible to clients and allows Windows clients to map a drive to the Snapshot copy directory to view and access its contents. NFS and SMB clients can then restore a file or LUN from a snapshot.

You can enable or disable access to a volume's Snapshot copy directory by editing the volume settings or by editing the volume's share settings.

## Enable or disable client access to Snapshot copy directory by editing a volume

### Steps

You can enable and disable client Snapshot copy directory access by using ONTAP System Manager or the ONTAP CLI. The Snapshot copy directory on a volume is accessible to clients by default.

#### System Manager

1. Click **Storage > Volumes**.
2. Select the volume containing the Snapshot copies directory you want to either show or hide.
3. Click  and select **Edit**.
4. In the **Snapshot Copies (Local) Settings** section, select or deselect **Show the Snapshot copies directory to clients**.
5. Click **Save**.

#### CLI

1. Check the Snapshot directory access status:

```
volume show -vserver <SVM_name> -volume <vol_name> -fields snapdir-  
access
```

Example:

```
clus1::> volume show -vserver vs0 -volume vol1 -fields snapdir-  
access  
vserver volume snapdir-access  
-----  
vs0      vol1      false
```

2. Enable or disable the Snapshot copy directory access:

```
volume modify -vserver <SVM_name> -volume <vol_name> -snapdir-access  
<true|false>
```

The following example enables Snapshot copy directory access on vol1:

```
clus1::> volume modify -vserver vs0 -volume vol1 -snapdir-access  
true  
Volume modify successful on volume vol1 of Vserver vs0.
```

## Enable or disable client access to Snapshot copy directory by editing a share

The Snapshot copy directory on a volume is accessible to clients by default.

### Steps

1. Click **Storage > Shares**.
2. Select the volume containing the Snapshot copies directory you want to either show or hide.
3. Click  and select **Edit**.
4. In the **Share Properties** section, select or deselect **Allow clients to access Snapshot copies directory**.
5. Click **Save**.

## Restore a single file from a Snapshot copy

You can use the `volume snapshot restore-file` command to restore a single file or LUN from a Snapshot copy. You can restore the file to a different location in the parent read-write volume if you do not want to replace an existing file.

### About this task

If you are restoring an existing LUN, a LUN clone is created and backed up in the form of a Snapshot copy. During the restore operation, you can read from and write to the LUN.

Files with streams are restored by default.

### Steps

1. List the Snapshot copies in a volume:

```
volume snapshot show -vserver SVM -volume volume
```

For complete command syntax, see the man page.

The following example shows the Snapshot copies in `vol1`:

```
clus1::> volume snapshot show -vserver vs1 -volume vol1
```

Vserver	Volume	Snapshot	State	Size	Total%	Used%
-----	-----	-----	-----	-----	-----	-----
vs1	vol1	hourly.2013-01-25_0005	valid	224KB	0%	0%
		daily.2013-01-25_0010	valid	92KB	0%	0%
		hourly.2013-01-25_0105	valid	228KB	0%	0%
		hourly.2013-01-25_0205	valid	236KB	0%	0%
		hourly.2013-01-25_0305	valid	244KB	0%	0%
		hourly.2013-01-25_0405	valid	244KB	0%	0%
		hourly.2013-01-25_0505	valid	244KB	0%	0%

```
7 entries were displayed.
```

## 2. Restore a file from a Snapshot copy:

```
volume snapshot restore-file -vserver SVM -volume volume -snapshot snapshot  
-path file_path -restore-path destination_path
```

For complete command syntax, see the man page.

The following example restores the file `myfile.txt`:

```
cluster1::> volume snapshot restore-file -vserver vs0 -volume vol1  
-snapshot daily.2013-01-25_0010 -path /myfile.txt
```

## Restore part of a file from a Snapshot copy

You can use the `volume snapshot partial-restore-file` command to restore a range of data from a Snapshot copy to a LUN or to an NFS or SMB container file, assuming you know the starting byte offset of the data and the byte count. You might use this command to restore one of the databases on a host that stores multiple databases in the same LUN.

Beginning in ONTAP 9.12.1, partial restore is available for volumes using [SnapMirror active sync](#).

### Steps

#### 1. List the Snapshot copies in a volume:

```
volume snapshot show -vserver SVM -volume volume
```

For complete command syntax, see the man page.

The following example shows the Snapshot copies in `vol1`:

```
clus1::> volume snapshot show -vserver vs1 -volume vol1
```

Vserver	Volume	Snapshot	State	Size	Total%	Used%
-----	-----	-----	-----	-----	-----	-----
vs1	vol1	hourly.2013-01-25_0005	valid	224KB	0%	0%
		daily.2013-01-25_0010	valid	92KB	0%	0%
		hourly.2013-01-25_0105	valid	228KB	0%	0%
		hourly.2013-01-25_0205	valid	236KB	0%	0%
		hourly.2013-01-25_0305	valid	244KB	0%	0%
		hourly.2013-01-25_0405	valid	244KB	0%	0%
		hourly.2013-01-25_0505	valid	244KB	0%	0%

7 entries were displayed.

#### 2. Restore part of a file from a Snapshot copy:

```
volume snapshot partial-restore-file -vserver SVM -volume volume -snapshot snapshot -path file_path -start-byte starting_byte -byte-count byte_count
```

The starting byte offset and byte count must be multiples of 4,096.

The following example restores the first 4,096 bytes of the file `myfile.txt`:

```
cluster1::> volume snapshot partial-restore-file -vserver vs0 -volume vol1 -snapshot daily.2013-01-25_0010 -path /myfile.txt -start-byte 0 -byte-count 4096
```

## Restore the contents of a volume from a Snapshot copy

You can recover a volume to an earlier point in time by restoring from a Snapshot copy. You can use System Manager or the `volume snapshot restore` command to restore the contents of a volume from a Snapshot copy.

### About this task

If the volume has SnapMirror relationships, manually replicate all mirror copies of the volume immediately after you restore from a Snapshot copy. Not doing so can result in unusable mirror copies that must be deleted and recreated.

### Steps

You can use System Manager or the ONTAP CLI to restore from an earlier Snapshot copy.

## System Manager

1. Click **Storage** and select a volume.
2. Under **Snapshot Copies**, click  next to the Snapshot copy you want to restore, and select **Restore**.

## CLI

1. List the Snapshot copies in a volume:

```
volume snapshot show -vserver <SVM> -volume <volume>
```

The following example shows the Snapshot copies in `vol1`:

```
clus1::> volume snapshot show -vserver vs1 -volume vol1
```

Vserver	Volume	Snapshot	State	Size	Total%	Used%
-----	-----	-----	-----	-----	-----	-----
vs1	vol1	hourly.2013-01-25_0005	valid	224KB	0%	0%
		daily.2013-01-25_0010	valid	92KB	0%	0%
		hourly.2013-01-25_0105	valid	228KB	0%	0%
		hourly.2013-01-25_0205	valid	236KB	0%	0%
		hourly.2013-01-25_0305	valid	244KB	0%	0%
		hourly.2013-01-25_0405	valid	244KB	0%	0%
		hourly.2013-01-25_0505	valid	244KB	0%	0%

7 entries were displayed.

2. Restore the contents of a volume from a Snapshot copy:

```
volume snapshot restore -vserver <SVM> -volume <volume> -snapshot  
<snapshot>
```

The following example restores the contents of `vol1`:

```
cluster1::> volume snapshot restore -vserver vs0 -volume vol1  
-snapshot daily.2013-01-25_0010
```
