Migrate Windows-based SnapCenter VMware backup metadata

You use the SnapCenter Windows PowerShell cmdlets to migrate SnapCenter VM-consistent backup metadata and SnapCenter application-consistent for virtualized data backup metadata to the SnapCenter Plug-in for VMware vSphere virtual appliance.

Steps

1. Back up the MySQL database and then copy and move that backup to a different location to make sure it does not get deleted due to the retention policy.

[Back up the SnapCenter Plug-in for VMware vSphere MySQL database](#)

2. Log on to the VMware vSphere web client and verify that no jobs are running.
3. Log on to the SnapCenter GUI using the SnapCenter Admin username.

Do not use any other username to log in, even if that username has all permissions, because it might cause a migration error.

4. In the Windows SnapCenter GUI left navigation pane, click **Settings**, then click the **Credential** tab, and then click **Add** to add credentials for the virtual appliance.
5. Create the name of the Run As credential to be used in the ``invoke-SCVOVAMigration`` cmdlet.

You must select Linux for the Authentication field.

This step adds the credentials that SnapCenter Server uses to access the virtual appliance during the migration.

6. Open a Windows PowerShell window and run the following cmdlets:

```
Open-SmConnection
```

```
invoke-SCVOVAMigration -SourceSCVHost <old-SCV-host-IP> -DestinationSCVOVAHost  
<new-appliance-IP> -OVACredential <appliance-credentials>  
-ByPassValidationCheck -Overwrite -ContinueMigrationOnStorageError  
-ScheduleOffsetTime <time-offset>
```

For an overview of the migration workflow, see [Migration workflow](#)

The optional `-Overwrite` parameter enables faster migration for large environments. This parameter overwrites data in the MySQL database on the SnapCenter Plug-in for VMware vSphere host.

Do not use the `-Overwrite` parameter more than once. If your migration was a partial migration, using the `-Overwrite` parameter again might overwrite existing migrated data. If you run `invoke-SCVOVAMigration` more than once without the `-Overwrite` parameter, previously migrated data will be duplicated.

Use the `ScheduleOffsetTime` parameter if the source SnapCenter host and the destination SnapCenter VMware virtual appliance host are in different time zones. The value can be a positive or negative time offset to adjust scheduled backup run times. Specify the time difference in the format `hh:mm:ss`; for example, `06:00:00`, or `-06:00:00` for a negative value.
