 cimconfig 1

CIMOM commands

cimconfig

You can use the `cimconfig` command to configure CIMOM settings, such as enabling and disabling HTTP and HTTPS and changing the HTTP and HTTPS port numbers. After entering the `cimconfig` command or creating an environment variable for the NetApp SMI-S Provider configuration value, you must restart the CIM server by using the `smis cimserver restart` command.

Syntax

```
cimconfig options
```

Location

```
C:\Program Files (x86)\NetApp\smis\pegasus\bin
```

Privilege level

Administrator (Windows)

Options

- **-c**

Specifies that the configuration setting applies to the current CIMOM configuration.

- **-d**

Specifies that the configuration setting applies to the default CIMOM configuration.

- **-g**

Gets the value of a specified configuration property.

- **-h, --help**

Displays help for the `cimconfig` command.

- **-l**

Lists all CIMOM configuration properties.

- **-p**

Specifies that the configuration setting is applied when the CIM server is next started.

- **-s**

Sets the specified configuration property value.

- **-u**

Resets the configuration property to its default value.

- **--version**

Displays the version of the CIM server.

Example

Change the maximum log file size to 15000 KB:

```
cimconfig -s maxLogFileSizeKBytes=15000
Current value for the property maxLogFileSizeKBytes is set to "15000" in
CIMServer.
smis cimserver restart
```
