SMI-S Provider commands

Overview

You can use the `smis` commands to manage storage systems and to display information about the CIM object manager.

Help is available for the `smis` command by using the `-help` option.

- **smis `-help`**

  Displays a command summary.

- **smis `-help` examples**

  Displays usage examples.

- **smis `-help` *`subcommand`***

  Displays help for the specified subcommand.

The default timeout value for the smis tool is 180 seconds.

smis add

The `smis add` command adds a storage system with an HTTP connection to your configuration to enable you to manage and monitor the device. Unless is it necessary, you should use `smis addsecure` instead of `smis add`.

Syntax

```
smis add

storage_sys storage_sys_user
[-t {http | https}]
```

Operating systems using languages other than U.S. English cannot use the `add` command.

Location

```
C:\Program Files (x86)\NetApp\smis\pegasus\bin
```

Privilege level

Administrator (Windows)

Parameters

- ***`storage_sys`***

  Name or IP address of the storage system that you are adding

  If you are specifying the IP address, you can use IPv4 or IPv6. Both compressed and full IPv6 addressees

are supported, for example **1001:0002:0000:0000:0000:0000:0003:0004** or **1001:2::3:4**.

- ***storage_sys_user***

  User name of the administrator who manages the storage system that you are adding

- ***storage_sys_pwd***

  Optional: password of the administrator who manages the storage system that you are adding

  As a best practice, do not use this parameter for security reasons. This parameter is provided only for automation and backward compatibility.

- **[-t {http | https}]**

  Protocol to be used: HTTPS (default) or HTTP

Storage system-agent and agent-client protocol

The `smis add` and `smis addsecure` commands determine the protocol used between the storage system and the provider. The `[-t {`**`http | https`**`}]` parameter determines the protocol used between the provider and the client.

The `smis addsecure` command and the `[-t {`**`https`**`}]` parameter connects using SSL encryption, and unencrypted traffic is not allowed. The `smis add` command and the `[-t {`**`http`**`}]` parameter connects without using SSL encryption, and unencrypted traffic is allowed.

You should consider your environment's security needs before disabling SSL-encrypted connections.

Example

Add a storage system using IPv4 with an IP address of 10.32.1.4 over HTTP:

```
smis add 10.32.1.4 user2
```

A confirmation message appears that the storage system was successfully added. If an error occurred, an error message appears.

Example

Add a storage system using IPv6 over HTTP:

```
smis add 1001:0002:0000:0000:0000:0000:0003:0004 user2
smis add 1001:2::3:4 user2
```

A confirmation message appears that the storage system was successfully added. If an error occurred, an error message appears.

Example

Add a storage system with an IP address of 10.32.1.4 over HTTP on a non-English-language system:

```
cimcli -n root/ontap ci ontap_filerdata hostname="10.32.1.4"
username="vsadmin" password="PasSw0Rd" port=80 comMechanism="HTTP"
--timeout 180
```

smis addsecure

The `smis addsecure` command adds a storage system with an HTTPS connection to your configuration to enable you to manage and monitor the device. Unless is it necessary, you should use `smis addsecure` instead of `smis add`.

Syntax

```
smis addsecure

storage_sys storage_sys_user
[-t {http | https}]
```

> Operating systems using languages other than U.S. English cannot use the `addsecure` command.

Location

```
C:\Program Files (x86)\NetApp\smis\pegasus\bin
```

Privilege level

Administrator (Windows)

Parameters

- ***storage_sys***

  Name or IP address of the storage system that you are adding

  If you are specifying the IP address, you can use IPv4 or IPv6. Both compressed and full IPv6 addressees are supported, for example `1001:0002:0000:0000:0000:0000:0003:0004` or `1001:2::3:4`.

- ***storage_sys_user***

  User name of the administrator who manages the storage system that you are adding

- ***storage_sys_pwd***

  Optional: password of the administrator who manages the storage system that you are adding

  As a best practice, do not use this parameter for security reasons. This parameter is provided only for automation and backward compatibility.

- **[-t {http | https}]**

  Protocol to be used: HTTPS (default) or HTTP

Storage system-agent and agent-client protocol

The `smis add` and `smis addsecure` commands determine the protocol used between the storage system and the provider. The `[-t {http | https}]` parameter determines the protocol used between the provider and the client.

The `smis addsecure` command and the `[-t {https}]` parameter connects using SSL encryption, and unencrypted traffic is not allowed. The `smis add` command and the `[-t {http}]` parameter connects without using SSL encryption, and unencrypted traffic is allowed.

You should consider your environment's security needs before disabling SSL-encrypted connections.

Example

Add a storage system using IPv4 with an IP address of 10.32.1.4 over HTTPS:

```
smis addsecure 10.32.1.4 user2 password2
```

A confirmation message appears that the storage system was successfully added. If an error occurred, an error message appears.

Example

Add a storage system using IPv6 over HTTPS:

```
smis addsecure 1001:0002:0000:0000:0000:0000:0003:0004 user2 password2
smis addsecure 1001:2::3:4 user2 password2
```

A confirmation message appears that the storage system was successfully added. If an error occurred, an error message appears.

Example

Add a storage system with an IP address of 10.32.1.4 over HTTPS on a non-English-language system:

```
cimcli -n root/ontap ci ontap_filerdata hostname="10.32.1.4"
username="vsadmin" password="PasSw0Rd" port=443 comMechanism="HTTPS"
--timeout 180
```
