# Allowing supplemental commands on the Snap Creator Agent

If you want to run a supplemental command on the Snap Creator Agent, you must explicitly permit the command to be executed by including it in the `allowed_commands.config` file on the Agent.

`allowed_commands.config` is located in the `etc` subdirectory of the Snap Creator Agent installation directory. For example:

- On UNIX hosts, `/install/path/scAgent4.1.x/etc/allowed_commands.config`
- On Windows hosts, `C:\Program Files\NetApp\Snap_Creator_Framework\scAgent4.1.x\etc\allowed_commands.config`

To allow supplemental commands on the Agent, open `allowed_commands.config` in an editor. Enter each command on its own line, exactly as you would enter the command at a command prompt. Case is significant. Make sure to specify the fully qualified pathname. Enclose the pathname in quotation marks if it contains spaces. For example:

```
"C:\Program Files\NetApp\SnapDrive\sdcli.exe"  
myscript.bat
```

Restart the Agent for the changes to take effect.

For security reasons, you should not use a wildcard entry (\*) to allow all commands.
