Backing up databases

You can back up databases on demand or on a schedule. You can use either the Snap Creator GUI or the Snap Creator CLI to back up databases.

You can use the GUI to back up databases. For information on how to use the CLI, see the [Snap Creator Framework 4.1.2 Administration Guide](#).

Related information

- [Scheduling backups](#)

Backing up databases on demand

You should back up your databases as soon as they are available in NetApp storage. You can schedule recurring backups after the initial backup.

You should have created the configuration file for the backup, as described in [Creating a configuration file](#).

1. In the Profiles and Configurations pane, select the configuration file and click **Actions > Backup**.
2. In the Additional Parameters dialog box, select the policy for the backup job in the **Policy** drop-down and click **OK**.

You must have configured the policy in the configuration file.

Snap Creator starts the backup job. Job information is displayed in the Console pane.

Scheduling backups

You can schedule recurring backup jobs after performing the initial backup.

You should have created the configuration file for the backup, as described in [Creating a configuration file](#).

1. In the Profiles and Configurations pane, select the configuration file and click **Management > Schedules** at the top of the Snap Creator Framework window.

2. In the Jobs pane, click **Create**
3. In the New Job dialog, specify the job information:

For this field...	Do this...
Job Name	Enter the name of the job.
Start Date	Use the calendar control to select the date on which the schedule should start.
Active	Select this box to activate the schedule. Deselect the box to deactivate the schedule.
Profile	Select the profile for the configuration file.
Configuration	Select the configuration file.
Action	Select backup.
Policy	Select the policy for the backup job. Note: You must have configured the policy in the configuration file.
Frequency	Select the frequency with which the job should run. Depending on your choice, new fields are displayed where you can specify the minute, hour, and day to run the job. If you want to use a cron job, select cron and enter the cron command.

The following example shows how to schedule a backup job to run every day at midnight:

New Job

Job Name:

Start Date:

Active: ☒

Profile:

Configuration:

Action:

Policy:

Frequency:

Hour:

Minute:

Save

4. Click **Save**.

The scheduled job is listed on the Schedules tab in the Jobs pane. Select the job to run, edit, or delete it.
