SAP HANA File-Based Backup and Database Integrity Checks

SAP recommends combining storage-based Snapshot backups with a weekly file-based backup to execute a block integrity check. The block integrity check can be executed from within the Snap Creator graphical user interface (GUI) or command line interface (CLI).

The File-Based Data Backup operation is used when the backup copies of files are to be retained. The Database Integrity Checks operation is used when backup copies have to be discarded.

You can configure either one or both of the operations. During on demand backup, you can choose either one of the operations.

Modifying configuration for File-Based Backup

You can modify the parameters that are configured for File-Based Backup. The subsequent scheduled or on-demand File-Based Backup operation reflects the updated information.

- 1. Click on the SAP HANA profile.
- 2. Select the configuration that you want to modify, and click HANA File Based Backup Settings.

| Profiles and Configurations | Configuration Context : SAP_HAMA > SCH_HAMA | |
|-----------------------------|--|--|
| Q AddProte # Hefresh | Actors +) & Renad (all lase) | |
| U SCHLHMA | General Connector Volumes Bragenetiaetings Snackenetings Connectors OncommoDPM Antive Lig Management SAP INNA MANA Her Inseet Backer Settings MANA Inserts Settings Avent Settings Connectors Connectors | |
| | File-Backup Location Paralitatu/SCNInvet000119ve00001 | |
| | Fieldania peter Reducio | |
| | Bradie File-Backury 2 | |

3. Edit the information, and click **Save**.

Modifying configuration for Database Integrity Checks

You can modify the parameters that are configured for Database Integrity Checks. The subsequent scheduled or on-demand Integrity Check operation reflects the updated information.

- 1. Click on the SAP HANA profile.
- 2. Select the configuration that you want to modify, and click HANA Integrity Check Settings.

| Profiles and Configurations - | C Configuration Contract / SAP_MARK > SCH_MARK | |
|---|--|-------|

| Canada | | ÷, |

3. Edit the information, and click **Save**.

Scheduling file-based backup

For SAP HANA configurations, you can schedule additional operations such as file-based backup and database integrity checks. You can schedule the file-based backup operation to occur at specific intervals.

- 1. From the main menu of the Snap Creator GUI, select **Management > Schedules**, and click **Create**.
- 2. In the New Job window, enter the details for the job.

| Start Date: 2016-01-22 Active: Profile: SAP_HANA | |
|--|---|
| | |
| Profile: SAP HANA | |
| | ~ |
| Configuration: SCN_HANA | ~ |
| Action: fileBasedBackup | ~ |
| Policy: | ~ |
| Frequency: | - |
| | |

The file-based backup policy is set to "none" by default.

Scheduling database integrity checks

For SAP HANA configurations, you can schedule additional operations such as file-based backup and database integrity checks. You can schedule the database integrity checks operation to occur at specific intervals.

- 1. From the main menu of the Snap Creator GUI, select **Management > Schedules**, and click **Create**.
- 2. In the New Job window, enter the details for the job.

The integrity check policy is set to "none" by default.

| lob Name: | SAPFBBackup | |

| | | |

Performing File-Based Backup from the Snap Creator GUI

You can perform File-Based Backup from the Snap Creator graphical user interface (GUI).

You must have enabled the File-Based Backup parameter in the HANA File-Based Backup Settings tab.

- 1. Select the HANA_database_backup configuration.
- 2. Select Actions > File-Based Backup.

| Configurations * | | | | | | | |

Performing File-Based Backup from Snap Creator command line

You can perform File-Based Backup using the Snap Creator command line.

1. To perform File-Based Backup, run the following command:

```
./snapcreator --server localhost --port 8443 --user sc --passwd sc
--profile hana_testing --config HANA_Test --action fileBasedBackup
--policy none --verbose
```

Performing Database Integrity Checks from Snap Creator GUI

You can perform Database Integrity Checks from the Snap Creator graphical user interface (GUI).

You must have enabled the DB Integrity Check parameter in the HANA Integrity Check Settings tab.

- 1. Select the HANA_database_integrity_check configuration.
- 2. Select Actions > Integrity Check.

| Profiles and Configurations 4 | Configuration Conter | IL: SAP_ | HANA > SCN_HANA | | | | |
|-------------------------------|---|----------|--|------|--|---|-------------|
| Add Protie & Rethern | Actoms • 20 Reso L/N Core Volume Core Volume Core Backup File-Band Backup Prestore Active Discover Active Log Active Log Active Log Active Log Active Log Mount Mount | oluties | Bave Snapshot settings HANA Magity Che | | | - | OrConnandOF |

3. Set the Policy option to None, and click OK.

Performing Database Integrity Checks from Snap Creator command line

You can perform Database Integrity Checks using the Snap Creator command line.

1. To perform Database Integrity Checks, run the following command:

```
./snapcreator --server localhost --port 8443 --user sc --passwd sc
--profile hana_testing --config HANA_Test --action integrityCheck
--policy none --verbose
```
