# Adding an igroup

SnapDrive for UNIX allows you to add a particular igroup for the storage system to the host and perform SnapDrive operations by using the configured igroup.

To add an igroup to the host, you must do the following:

- Use the `snapdrive igroup add` command
- Verify that the igroup is available in the storage system

## Steps

1. Add an igroup by entering the following command on the host:

```
snapdrive igroup add igroup_name filer_name [filer_name...]
```

The following example output shows an igroup that has been added successfully for the storage system toaster:

```
snapdrive igroup add ig toaster  
Added igroup configuration for appliance: toaster
```
