Deleting LUNs with exported disk groups on Linux LVM2 fails

SnapDrive for UNIX does not delete LUNs with exported disk groups on Linux LVM2.

If you export a disk group (dg) on Linux LVM2 and try to delete the LUN, the delete operation fails.

Workaround

You have to use `vgimport <dgname>` to import the disk group and then use the following command to delete the disk group and LUN: `# snapdrive storage delete - dg <dgname> [-full]`
