Error message locations

SnapDrive for UNIX provides information about error messages as command output and in various log files.

SnapDrive for UNIX provides information about error messages in the following places:

- The command output

It displays all messages to the standard error output of the SnapDrive for UNIX command.

- The system log

SnapDrive for UNIX logs all errors that have a severity level of Fatal and Admin error to the system log using the syslog(3) mechanism.

- The audit log file

The audit log records the following information for each SnapDrive for UNIX command:

- Who issued it
- When it was issued
- What its exit status was.

This is very useful in determining what actually happened on a system.

- The trace log file

The trace log records more detailed information about any errors that occur. NetApp Technical support uses this log when diagnosing problems.
