Limitations of LUNs managed by SnapDrive 1

Limitations of LUNs managed by SnapDrive

When working with SnapDrive, you must be aware of the limitations related to LUNs.

- A LUN managed by SnapDrive cannot serve either as a boot disk or a system disk.
- The Linux hosts have operating system limits on how many LUNs you can create.

You can run the `snapdrive config check luns` command when you create the LUNs on these hosts. This command enables you to determine how many LUNs you can create.

- SnapDrive does not support the colon (:) in the long forms of the names for LUNs and Snapshot copies.

The colon is allowed between the components of a long Snapshot copy name or between the storage system name and storage system volume name of a LUN. For example, `toaster:/vol/vol1:snap1` is a typical long Snapshot name, while `toaster:/vol/vol1/lunA` is a typical long LUN name.
