SnapDrive fails to add newly mapped LUNs in RHEL 6.6 and later

The rescan script `/usr/bin/rescan-scsi-bus.sh` bundled with the `sg3_utils` package fails to add the newly mapped LUNs in SnapDrive for UNIX running on Red Hat Enterprise Linux 6.6 and later.

Workaround

1. Create a file called `dynamic-lun-rescan.sh` in the `/root` directory and provide full permission to the file.
2. Add the command `/usr/bin/rescan-scsi-bus.sh -a -r` in the `dynamic-lun-rescan.sh` file.
