snapdrived stop or snapdrived start command hangs 1

snapdrived stop or snapdrived start command hangs

`snapdrived stop` or `snapdrived start` command might hang in some cases.

To resolve this problem, run the `snapdrived status` to check how many commands are in execution and at what time they started. `snapdrived stop` command waits for all commands in execution to complete. If you believe that any command hangs, issue `snapdrived -force stop` or `snapdrived -force restart` command.

The `-force` option kills all running commands and daemon stops. This can have side effects on system state like stale device entries and future daemon starts.
