# Connecting LUNs with disk groups, host volumes, and file systems

To use the `snapdrive storage connect` command to connect LUNs that have disk groups, host volumes and file systems, you need to follow the syntax.

Enter the following command:

```
snapdrive storage connect-fs file_spec -hostvol file_spec -lun long_lun_name
[lun_name...] [-igroup ig_name [ig_name...]] [-nopersist] [-mntopts options] [-fstype
type] [-vmttype type]
```

## Example: Connecting a file system created on a LUN

```
# snapdrive storage connect -fs /mnt/fs -lun f270-221-189:/vol/vol0/lun111
-nolvm
mapping lun(s) ... done
discovering lun(s) ... done
LUN f270-221-189:/vol/vol0/lun111 connected
- device filename(s): /dev/vx/dmp/fas2700_939
```

## Example: Connecting a file system created on a RDM LUN

```
# snapdrive storage connect -fs /mnt/fs -lun lech:/vol/vol1/lun1 -nolvm
exporting new lun(s) to Guest OS ... done
discovering lun(s) ... done
LUN lech:/vol/vol1/lun1 connected
- device filename(s): /dev/sdb
```
