Methods for displaying storage information

To make it easier to display information about storage, SnapDrive for UNIX provides several formats for the `snapdrive storage show` command.

Storage show operations fall into the following general categories:

- Displaying information about a specific LUN.
- Listing information about LUNs available for specific storage systems or storage system volumes.
- Displaying information about LUNs associated with the arguments you specify.

These arguments can include NFS entities, file systems, host volumes, or disk groups. If you use the `-verbose` option at the command prompt, SnapDrive for UNIX provides detailed output, such as showing the storage hierarchy including the backing LUNs.

- Displaying information about the devices known to the host.
- Displaying information about all devices and LVM entities known to the host.
- Displaying the status of a resource as shared or dedicated.
