SnapDrive for UNIX does not show the supported file system types for storage create operation

SnapDrive for UNIX does not show the supported file system types for storage create operation.

The snapdrive storage create operation fails to create a UFS file system over raw LUNs (LUNs without any volume manager components), using the `-fstype` option and the iSCSI transport, if the following are true:

- UFS file system is present
- VxVM components (VxVM, VxFS and DMP) are not installed
- HBA driver for Emulex is loaded

The following error message is displayed, if the operation fails.

```
0001-539 Command error: Snapdrive cannot create a file system of type ufs
Supported types for storage create are:
```

Workaround

Unload the Emulex driver (lpfc) on the host using the `modunload` command.
