Changing the default daemon password 1

Changing the default daemon password

SnapDrive for UNIX is assigned a default daemon password, which you can change later. This password is stored in an encrypted file with read and write permissions assigned to only the root user. After the password is changed, all the client applications must be notified manually.

You must be logged in as the root user.

Steps

1. Change the default password:

```
snapdrived passwd
```

2. Enter the password.
3. Confirm the password.
