Verifying storage system user names associated with SnapDrive for UNIX

You can verify which user name SnapDrive for UNIX has associated with a storage system by executing the `snapdrive config list` command.

You must have logged in as root user.

Steps

1. Enter the following command:

```
snapdrive config list
```

This command displays the user name or storage system pairs for all systems that have users specified within SnapDrive for UNIX. It does not display the passwords for the storage systems.

This example displays the users associated with the storage systems named `rapunzel` and `medium storage system`:

```
# snapdrive config list
user name           storage system name
-----
rumplestiltskins   rapunzel
longuser           mediumstoragesystem
```
