Verifying the supported configurations

You can verify the supported configurations in SnapDrive for UNIX by examining the components in the host system (such as, operating system, version of software installed on the host, protocol, file systems on the host, and so on) and the value specified for each configuration parameter in the `snapdrive.conf` file.

Steps

1. Verify the supported configurations:

```
sdconfcheck check
```

```
[root@scspr0023764001 bin]# sdconfcheck check
```

```
NOTE: SnapDrive Configuration Checker is using the data file version  
v12052013
```

```
    Please make sure that you are using the latest version.
```

```
    Refer to the SnapDrive for Unix Installation and Administration Guide  
for more details.
