 - General notes about the commands 1

Collecting information needed by SnapDrive for UNIX commands

This chapter provides information about the SnapDrive for UNIX commands, the format, option, keywords, and examples.

Collecting information needed by commands

SnapDrive for UNIX commands follow a format and have keywords associated with them. The commands have options and arguments, and require values to be entered by the user.

The checklists helps the user to quickly execute SnapDrive for UNIX. For each command, it supplies the following:

- Recommended formats
- Information about the keywords, options, and arguments available with the commands and the values you should supply
- Examples of the commands

General notes about the commands

SnapDrive for UNIX commands have options such as `-dg`, `-vg`, `-lvol` and `-hostvol`.

Some general notes about the command follow:

- The `-dg` and `-vg` options are synonyms that reflect the fact that some operating systems refer to disk groups and others refer to volume groups. This guide uses `-dg` to refer to both disk groups and volume groups.
- The `-lvol` and `-hostvol` options are synonyms that reflect the fact that some operating systems refer to logical volumes and others refer to host volumes. This guide uses `-hostvol` to refer to both logical volumes and host volumes.
- It is better to use the default `igroup` and not specify an `igroup` explicitly by including the `-igroup` option.
