Creating Snapshot copies

SnapDrive for UNIX when deployed as a stand-alone product uses NetApp Snapshot technology, which enables you to create and manage Snapshot copies of the host data. You can use the Snapshot copies to restore the data.

Creating a Snapshot copy

You can create Snapshot copies of multiple file systems, host volumes, LUNs, or disk groups by using a single command while using storage area network (SAN) and NFS volumes in network-attached storage (NAS).

Steps

1. Create a Snapshot copy:

```
snapdrive snap create -fs file_spec -snapname snapshot_copy_name
```

Verifying the Snapshot copy

You can verify your Snapshot copy by restoring the data.

For more information, see [SnapDrive 5.3.2 for UNIX Administration Guide for Linux](#).
