- Configure email notifications 1

Event notification settings

You can configure event notification settings to send e-mail, Syslog, and AutoSupport messages if an event occurs.

If event notification settings are not configured when a Hyper-V parent host is added to SnapManager for Hyper-V, you can configure those settings later, using the Configuration wizard.

You can change the event notification settings by using the Configuration wizard even after the host has been added to SnapManager for Hyper-V.

You can configure the event notification settings before you can add virtual machine resources to a dataset.

Configure email notifications

Multiple email recipients for notifications must be separated by commas.

When you configure multiple email recipients for email notifications in SnapManager for Hyper-V, separate each recipient with a comma. This requirement differs from SnapManager for SQL in which each email notification recipient must be separated by semicolons.
