Error handling in custom scripts

SnapManager processes the custom script based on the specific return codes. For example, if your custom script returns a value of 0, 1, 2, or 3, SnapManager continues with the clone process. The return code also influences how SnapManager processes and returns the standard output of your script execution.

Return code	Description	Continue processing the operation
0	The script completed successfully.	Yes
1	The script completed successfully, with informational messages.	Yes
2	The script completed, but includes warnings	Yes
3	The script fails, but the operation continues.	Yes
4 or >4	The script fails and the operation stops.	No
