Support for Oracle RAC ASM databases without ASMLib

If you are using Oracle RAC databases, the RAC nodes must be updated with the `initasmdisks` file whenever an operation is performed in the master RAC node.

If no authentication is required to log in into the RAC nodes from the master node, the `asmmain.sh` performs a secure copy (SCP) of `initasmdisks` to all the RAC nodes. The master node's `initasmdisks` file will be called whenever restore happens, and the `asmmain.sh` script can be updated to invoke the same script in all the RAC nodes.

The `/etc/initasmdisks` file created that must be executed from either one of the startup scripts or from a newly defined script in the `rc3.d`. The `/etc/initasmdisks` file should always be executed before the `oracleha` service starts.
