Authorizing access to the repository 1

Authorizing access to the repository

In addition to role-based access control (RBAC), SnapManager enables you to set credentials for database users to access the repository. Using credentials, you can restrict or prevent access to the SnapManager hosts, repositories, profiles, and databases.

If you set credentials by using the credential set command, SnapManager does not prompt you for a password.

You can set user credentials when you install SnapManager or later.

1. Enter the following command:

```
'smo credential set -repository -dbname repo_service_name -host repo_host -login -username  
repo_username [-password repo_password] -port repo_port'
```
