Creating profile-level dump files

You can find log information about a particular profile by using the smoo profile dump command with the name of the profile.

1. Enter the following command: `smoo profile dump -profile profile_name`

Dump file location:

```
Path: /<user-home>  
/.netapp/smo/3.3.0/smo_dump_8abc01c814649ebd0114649ec69d0001.jar
```

If you encounter an error while creating a profile, use the `smosystem dump` command. After you have successfully created a profile, use the `smoooperation dump` and `smoprofile dump` commands.
