Creating the repository database instance

The repository database instance is an Oracle database in which you create the SnapManager repository. The repository database instance must be a stand-alone database and cannot be the target database.

You must have an Oracle database and a user account to access the database.

1. Log in to SQL *Plus: 'sqlplus / as sysdba'
2. Create a new tablespace for the SnapManager repository: 'create tablespacetablespace_name datafile '/u01/app/oracle/oradata/datafile/tablespace_name.dbf' size 100M autoextend on;'

tablespace_name is the name of the tablespace.

3. Verify the block size of the tablespace: 'select tablespace_name, block_size from dba_tablespaces;'

SnapManager requires a minimum 4-K block size for the tablespace.
