Verifying database backups 1

Verifying database backups

You can verify the backup of your database to ensure that the backed-up files are not corrupted.

If you did not select the **Verify backup using the Oracle DBVERIFY utility** check box while creating a backup, you must perform these steps manually to verify the backup. However, if you selected the check box, SnapManager automatically verifies the backup.

1. From the **Repositories** tree, select the profile.
2. Right-click the backup that you want to verify, and select **Verify**.
3. Click **Finish**.

If the operation fails, click **Operation Details** to view what caused the operation to fail.

In the **Repository** tree, right-click the backup, and then click **Properties** to view the results of the verify operation.

You can use backed-up files to perform restore operations. For information about how to perform restore operations using the SnapManager user interface (UI), see the *Online Help*. If you want to use the command-line interface (CLI) to perform restore operations, see the *SnapManager for Oracle Administration Guide for UNIX*.
