Cloning database backup 1

Cloning database backup

If you clone a database, you can perform tasks such as test an upgrade to a database without affecting the database in production, duplicate a master installation to several training systems, or duplicate a master installation as a base installation to other servers, which have similar requirements.

You can perform the following tasks related to cloning:

- Clone a database from an existing backup.
- Clone a database in its current state, which enables you to create the backup and the clone in one procedure.
- Clone a database and use custom plug-in scripts, which run before or after the clone operation.
- Clone a database to the same host on which the database resides.
- Clone a database by using archive log files from the external archive log location.
- Clone a database to an alternate host.
- View a list of clones.
- View detailed clone information.
- Delete clones.
