# Integration with other NetApp applications and technologies

SnapManager for Oracle is a stand-alone product that integrates the features from other NetApp products to enable fast backups that require only a small amount of space.

SnapManager integrates with the following NetApp applications and technologies:

Applications and technologies	Description
SnapDrive	SnapManager uses SnapDrive to create Snapshot copies of the storage. Snapshot copies ensure that backups are space-efficient and faster to create than the disk-to-disk backups.
FlexClone (a licensed feature of Data ONTAP)	SnapManager uses the FlexClone feature to create fast, space-efficient clones of backups.
Snapshot (a feature of Data ONTAP)	Snapshot technology creates point-in-time copies of the database.
SnapRestore (a licensed feature of Data ONTAP)	SnapManager reduces the mean time to recover a database by using SnapRestore. SnapRestore can recover individual files to a multi-terabyte volume so that operations can resume quickly.
SnapVault (a licensed feature of Data ONTAP)	SnapVault leverages disk-based backups for reliable, low-overhead backup and recovery of databases.
SnapMirror (a licensed feature of Data ONTAP)	SnapMirror replicates database data across a global network at high speeds in a simple, reliable, and cost-effective manner.
