 Task specification example 1

Creating a task specification file

You can create the task specification files by using graphical user interface (GUI), command-line interface (CLI), or a text editor. These files are used for performing preprocessing or post-processing activity of the backup, restore, or clone operations.

1. Create a task specification file by using GUI, CLI, or a text editor.

You can create the specification file based on the structure of the following sample task specification file:

```
<task-specification>
  <pre-tasks>
    <task>
      <name>name</name>
      <parameter>
        <name>name</name>
        <value>value</value>
      </parameter>
    </task>
  </pre-tasks>
  <post-tasks>
    <task>
      <name>name</name>
      <parameter>
        <name>name</name>
        <value>value</value>
      </parameter>
    </task>
  </post-tasks>
</task-specification>
```

2. Enter the script name.
3. Enter the parameter name and the value assigned to the parameter.
4. Save the XML file in the correct installation directory.

Task specification example

```

<task-specification>
  <pre-tasks>
    <task>
      <name>clone cleanup</name>
      <description>pre tasks for cleaning up the target
system</description>
    </task>
  </pre-tasks>
  <post-tasks>
    <task>
      <name>SystemCopy follow-up activities</name>
      <description>SystemCopy follow-up activities</description>
      <parameter>
        <name>SCHEMAOWNER</name>
        <value>SAMSR3</value>
      </parameter>
    </task>
    <task>
      <name>Oracle Users for OS based DB authentication</name>
      <description>Oracle Users for OS based DB
authentication</description>
      <parameter>
        <name>SCHEMAOWNER</name>
        <value>SAMSR3</value>
      </parameter>
      <parameter>
        <name>ORADBUSR_FILE</name>
        <value\>E:\mnt\sam\oradbusr.sql</value\>
      </parameter>
    </task>
  </post-tasks>
</task-specification>

```
