Restoring backups from an alternate location 1

Restoring backups from an alternate location

You can restore from an alternate location to restore the data files from an intermediate file system to an active file system.

- Create a restore specification XML file and specify the type of restore method you want to use.

You can use the `smo backup restore` command and specify the restore specification XML file you created to restore the backup from an alternate location.

1. Enter the following command: `smo backup restore -profileprofile-labellabel-complete-alllogs -restorespecrestorespec`
