- Accessing SnapManager 1
 - Starting the SnapManager host server 1
 - Using SnapManager commands 1
 - Starting the SnapManager GUI 2
 - Downloading and starting the graphical user interface using Java Web Start 2

Accessing SnapManager

You can access SnapManager by using either the command-line interface (CLI) or graphical user interface (GUI).

You can perform different SnapManager operations in the following ways:

- By entering commands in the CLI on a host that is in the same network as the database host.

For a list of all the commands and an explanation of their options and arguments, see the Command Reference chapter.

To access the CLI, click **Start > All Programs > NetApp > SnapManager for Oracle > Start SMO command-line interface (CLI)**.

- By accessing the GUI on a host in the same network as the database host.

The GUI provides simple and easy-to-use wizards to help you perform different operations.

Starting the SnapManager host server

You can start the SnapManager server by using the Windows services.

1. Click **Start > Control Panel > Administrative Tools > Services**.
2. In the Services window, select NetAppSnapManager 3.3 forOracle.
3. You can start the server in one of three ways:
 - In the left panel, click **Start**.
 - Right-click NetAppSnapManager 3.3 forOracle and select **Start** from the drop-down menu.
 - Double-click NetAppSnapManager 3.3 forOracle, and then in the Properties window, click **Start**.

Verifying the SnapManager host server status

The server must be running for you to execute commands or initiate SnapManager operations. You must verify the status of the server before performing any operations.

1. In the Services window, select SnapManager 3.3 forOracle.
2. View the status in the Status column.

Using SnapManager commands

After you start the SnapManager host server, you can use SnapManager by entering commands at the prompt on your host.

1. To perform an operation:

- In case of a Windows host, go to **Start > All Programs > NetApp > SnapManager for Oracle > Start SMO Command Line Interface (CLI)**

Starting the SnapManager GUI

If SnapManager is installed on the host, start the graphical user interface (GUI) for SnapManager by selecting the program from a list of programs.

- Ensure that the SnapManager server is started.

You can start the SnapManager GUI in one of the following ways:

- In the SnapManager host, click **Start > All Programs > NetApp > SnapManager for Oracle > Start SMO GUI**.
- If SnapManager is not installed on the host, use Java Web Start, which downloads SnapManager components and starts the GUI.

Downloading and starting the graphical user interface using Java Web Start

You can use Java Web Start if SnapManager is not installed on the host. Java Web Start downloads SnapManager components and starts the graphical user interface (GUI). The supported JRE versions are 1.5, 1.6, 1.7, and 1.8.

You must ensure that the following conditions are met:

- The SnapManager server is running.
 - A web browser window is open.
1. In the Microsoft Internet Explorer Web browser window, enter <https://smo-server.domain.com:port>.

smo-server.domain.com is the fully qualified host name and domain on which you installed SnapManager and port is the listening port for the SnapManager server (27214, by default).

You must enter https in the browser window.

A dialog box with the message There is a problem with the site's security certificate...Do you want to proceed? is displayed.

2. Click **Yes** or **Continue**.
3. Click on the link labeled Click here to download and install JRE 6.0 and the application.

A link labeled Download Java Web Start with the message This site might require the following ActiveX control: Java Plug-in 1.6"... "Click here to install is displayed.

4. In the Install window, perform the following steps:

- a. Click the message labeled Click here to install....

An **Install ActiveX Control** menu is displayed.

- b. Select **Install ActiveX Control**....

The message Internet Explorer - Security Warning" containing the following text: "Do you want to install this software? Name: Java Plug-in 1.6 is displayed.

- c. Click **Install**.

A "Java Plug-in 1.6." window for the installer for J2SE Runtime Environment 1.6 is displayed.

- d. Click **Install**.

A window requesting you to install J2SE Runtime Environment 1.6 is displayed.

5. In the Install window, perform the following steps:

- a. On the License Agreement page, select **I accept the terms in the license agreement** and click **Next**.
- b. On the Setup Type page, select **Typical** and click **Next**.
- c. On the Installation Completed window, click **Finish**.

SnapManager begins to download.

A File Download dialog box with the message Do you want to save this file? application.jnlp is displayed.

6. In the file download window, perform the following steps:

- a. Install the latest version of JRE 1.6 on the Windows client.
- b. Verify that Java is installed by running the following command: `java -version`

The output should indicate Java version 1.6.0_24 (which is Java 1.6) or later.

- c. Change your Windows configuration settings to always open files with extension jnlp with the program Java Web Start Launcher.

The steps to change the Windows configuration settings varies based on the version of Windows you are using.

- d. Enter the SnapManager URL that you have specified in the step 1.

The SnapManager download starts on the Windows client and a Warning - security dialog box is displayed.

1. Perform the following steps.

The message contents and button labels vary based on platform.

- a. In the Warning - Security dialog box, click **Yes**.

A dialog box is displayed.

- b. In the host name mismatch dialog box, click **Run**.

The Warning - Security dialog box with a message about the signature of the SnapManager application is displayed.

- c. Click **Run**.

A dialog box with the title Java Installer - Security Warning and the message Warning Security - the application's digital signature has an error. Do you want run the application, is displayed.

- d. Click **Run**.

The browser downloads and starts the SnapManager for Oracle GUI.
