# Delete credentials for individual resources

You can delete the credentials for any one of the secured resources, such as a profile, repository, or host. This enables you to remove the credentials for just one resource, rather than clearing the user's credentials for all resources.

## Delete user credentials for repositories

You can delete the credentials so a user can no longer access a particular repository. This command enables you to remove the credentials for just one resource, rather than clearing the user's credentials for all resources.

### Step

1. To delete repository credentials for a user, enter this command:

```
smsap credential delete -repository -dbname repo_service_name -host repo_host
-login -username repo_username -port repo_port
```

## Delete user credentials for hosts

You can delete the credentials for a host so a user can no longer access it. This command enables you to remove the credentials for just one resource, rather than clearing all the user's credentials for all resources.

### Step

1. To delete host credentials for a user, enter this command:

```
smsap credential delete -host -name host_name -username username
```

## Delete user credentials for profiles

You can delete the user credentials for a profile so a user can no longer access it.

### Step

1. To delete profile credentials for a user, enter this command:

```
smsap credential delete -profile -name profile_name
```
