Network topology examples

Grid Network topology

The simplest network topology is created by configuring the Grid Network only.

When you configure the Grid Network, you establish the host IP address, subnet mask, and Gateway IP address for the eth0 interface for each grid node.

During configuration, you must add all Grid Network subnets to the Grid Network Subnet List (GNSL). This list includes all subnets for all sites, and might also include external subnets that provide access to critical services such as NTP, DNS, or LDAP.

At installation, the Grid Network interface applies static routes for all subnets in the GNSL and sets the node's default route to the Grid Network gateway if one is configured. The GNSL is not required if there is no Client Network and the Grid Network gateway is the node's default route. Host routes to all other nodes in the grid are also generated.

In this example, all traffic shares the same network, including traffic related to S3 and Swift client requests and administrative and maintenance functions.

This topology is appropriate for single-site deployments that are not externally available, proof-of-concept or test deployments, or when a third-party load balancer acts as the client access boundary. When possible, the Grid Network should be used exclusively for internal traffic. Both the Admin Network and the Client Network have additional firewall restrictions that block external traffic to internal services. Using the Grid Network for external client traffic is supported, but this use offers fewer layers of protection.

Topology example: Grid Network only

Provisioned

GNSL → 200.200.200.0/24

| Grid Network | | |
|---------------------|-------------------|----------------|
| Nodes | IP/mask | Gateway |
| Admin | 200.200.200.32/24 | 200.200.200.1 |
| Storage | 200.200.200.33/24 | 200.200.200.1 |
| Storage | 200.200.200.34/24 | 200.200.200.1 |
| Storage | 200.200.200.35/24 | 200.200.200.1 |
| Storage | 200.200.200.36/24 | 200.200.200.1 |
| Gateway | 200.200.200.37/24 | 200.200.200.1 |

System Generated

| Nodes | Routes | Type | From |
|--------------|---------------------------|-------------|----------------------|
| All | 0.0.0.0/0 → 200.200.200.1 | Default | Grid Network gateway |
| | 200.200.200.0/24 → eth0 | Link | Interface IP/mask |

Admin Network topology

Having an Admin Network is optional. One way that you can use an Admin Network and a Grid Network is to configure a routable Grid Network and a bounded Admin Network for each node.

When you configure the Admin Network, you establish the host IP address, subnet mask, and Gateway IP address for the eth1 interface for each grid node.

The Admin Network can be unique to each node and can consist of multiple subnets. Each node can be configured with an Admin External Subnet List (AESL). The AESL lists the subnets reachable over the Admin Network for each node. The AESL must also include the subnets of any services the grid will access over the Admin Network, such as NTP, DNS, KMS, and LDAP. Static routes are applied for each subnet in the AESL.

In this example, the Grid Network is used for traffic related to S3 and Swift client requests and object management. while the Admin Network is used for administrative functions.

Topology example: Grid and Admin Networks

GNSL → 172.16.0.0/16

AESL (all) → 10.10.1.0/24 10.10.2.0/24 10.10.3.0/24

| Nodes | Grid Network | | Admin Network | |
|-----------|------------------|--------------|---------------|-----------|
| | IP/mask | Gateway | IP/mask | Gateway |
| Admin | 172.16.200.32/24 | 172.16.200.1 | 10.10.1.10/24 | 10.10.1.1 |
| Storage 1 | 172.16.200.33/24 | 172.16.200.1 | 10.10.1.11/24 | 10.10.1.1 |
| Storage 2 | 172.16.200.34/24 | 172.16.200.1 | 10.10.3.65/24 | 10.10.3.1 |
| Storage 3 | 172.16.200.35/24 | 172.16.200.1 | 10.10.1.12/24 | 10.10.1.1 |
| Storage 4 | 172.16.200.36/24 | 172.16.200.1 | 10.10.1.13/24 | 10.10.1.1 |
| Gateway | 172.16.200.37/24 | 172.16.200.1 | 10.10.3.66/24 | 10.10.3.1 |

System Generated

| Nodes | Routes | Type | From |
|------------|--------------------------|---------|----------------------|
| All | 0.0.0.0/0 → 172.16.200.1 | Default | Grid Network gateway |
| Admin, | 172.16.0.0/16 → eth0 | Static | GNSL |
| Storage 1, | 10.10.1.0/24 → eth1 | Link | Interface IP/mask |
| 3, and 4 | 10.10.2.0/24 → 10.10.1.1 | Static | AESL |
| | 10.10.3.0/24 → 10.10.1.1 | Static | AESL |
| Storage 2, | 172.16.0.0/16 → eth0 | Static | GNSL |
| Gateway | 10.10.1.0/24 → 10.10.3.1 | Static | AESL |
| | 10.10.2.0/24 → 10.10.3.1 | Static | AESL |
| | 10.10.3.0/24 → eth1 | Link | Interface IP/mask |

Client Network topology

Having a Client Network is optional. Using a Client Network allows client network traffic (for example, S3 and Swift) to be separated from grid internal traffic, which allows grid networking to be more secure. Administrative traffic can be handled by either the Client or Grid Network when the Admin Network is not configured.

When you configure the Client Network, you establish the host IP address, subnet mask, and Gateway IP address for the eth2 interface for the configured node. Each node's Client Network can be independent of the Client Network on any other node.

If you configure a Client Network for a node during installation, the node's default gateway switches from the Grid Network gateway to the Client Network gateway when installation is complete. If a Client Network is added later, the node's default gateway switches in the same way.

In this example, the Client Network is used for S3 and Swift client requests and for administrative functions, while the Grid Network is dedicated to internal object management operations.

Topology example: Grid and Client Networks

GNSL → 172.16.0.0/16

| Nodes | Grid Network | Client Network | |
|---------|------------------|----------------|----------|
| | IP/mask | IP/mask | Gateway |
| Admin | 172.16.200.32/24 | 37.5.5.10/24 | 37.5.5.1 |
| Storage | 172.16.200.33/24 | 37.5.5.11/24 | 37.5.5.1 |
| Storage | 172.16.200.34/24 | 37.5.5.12/24 | 37.5.5.1 |
| Storage | 172.16.200.35/24 | 37.5.5.13/24 | 37.5.5.1 |
| Storage | 172.16.200.36/24 | 37.5.5.14/24 | 37.5.5.1 |
| Gateway | 172.16.200.37/24 | 37.5.5.15/24 | 37.5.5.1 |

System Generated

| Nodes | Routes | | Type | From |
|-------|---------------|------------|---------|------------------------|
| All | 0.0.0.0/0 | → 37.5.5.1 | Default | Client Network gateway |
| | 172.16.0.0/16 | → eth0 | Link | Interface IP/mask |
| | 37.5.5.0/24 | → eth2 | Link | Interface IP/mask |

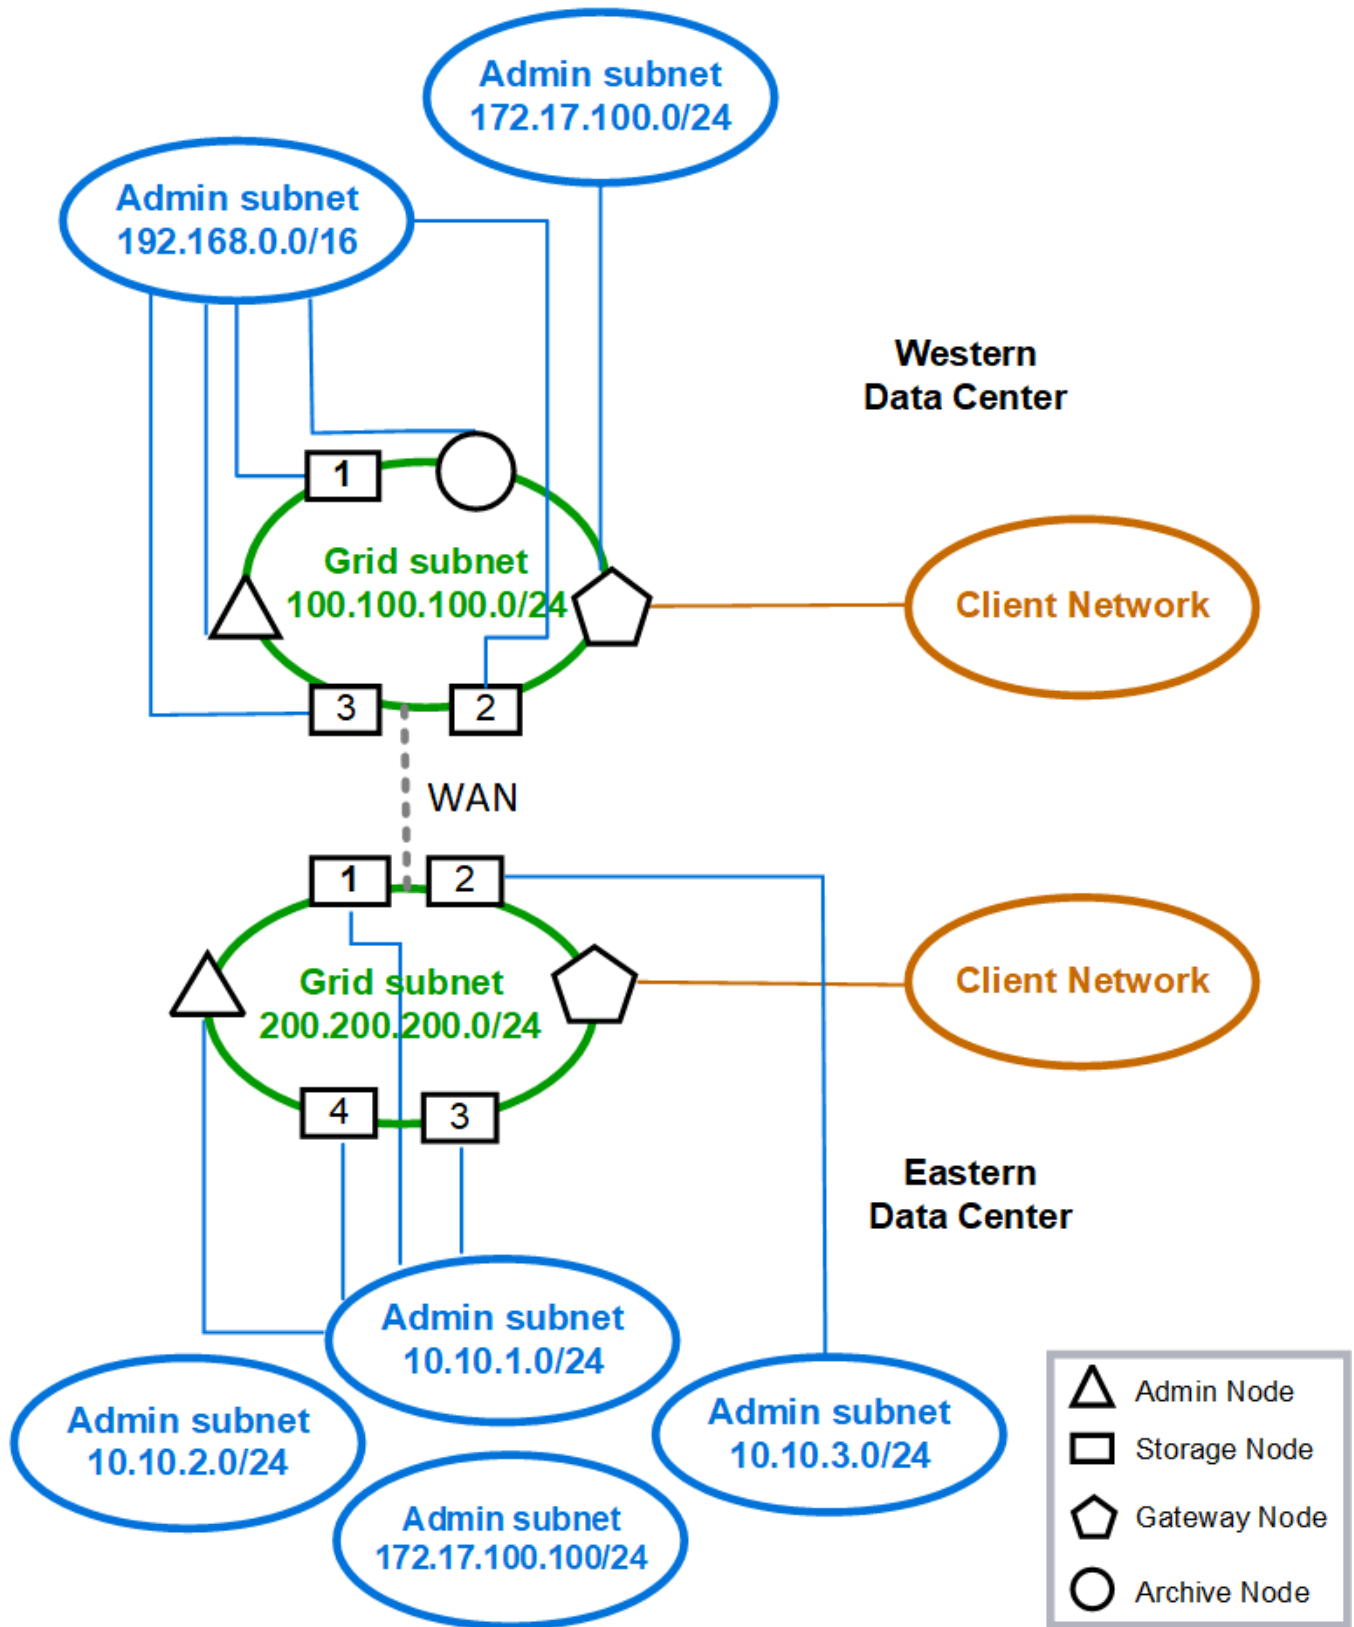

Topology for all three networks

You can configure all three networks into a network topology consisting of a private Grid Network, bounded site-specific Admin Networks, and open Client Networks. Using load balancer endpoints and untrusted Client Networks can provide additional security if needed.

In this example:

- The Grid Network is used for network traffic related to internal object management operations.
- The Admin Network is used for traffic related to administrative functions.
- The Client Network is used for traffic related to S3 and Swift client requests.

Topology example: Grid, Admin, and Client Networks
