# Troubleshoot lost and missing object data

## Troubleshoot lost and missing object data: Overview

Objects can be retrieved for several reasons, including read requests from a client application, background verifications of replicated object data, ILM re-evaluations, and the restoration of object data during the recovery of a Storage Node.

The StorageGRID system uses location information in an object's metadata to determine from which location to retrieve the object. If a copy of the object is not found in the expected location, the system attempts to retrieve another copy of the object from elsewhere in the system, assuming that the ILM policy contains a rule to make two or more copies of the object.

If this retrieval is successful, the StorageGRID system replaces the missing copy of the object. Otherwise, the **Objects lost** alert is triggered, as follows:

- For replicated copies, if another copy can't be retrieved, the object is considered lost, and the alert is triggered.
- For erasure-coded copies, if a copy can't be retrieved from the expected location, the Corrupt Copies Detected (ECOR) attribute is incremented by one before an attempt is made to retrieve a copy from another location. If no other copy is found, the alert is triggered.

You should investigate all **Objects lost** alerts immediately to determine the root cause of the loss and to determine if the object might still exist in an offline, or otherwise currently unavailable, Storage Node or Archive Node. See [Investigate lost objects](#).

In the case where object data without copies is lost, there is no recovery solution. However, you must reset the Lost objects counter to prevent known lost objects from masking any new lost objects. See [Reset lost and missing object counts](#).

## Investigate lost objects

When the **Objects lost** alert is triggered, you must investigate immediately. Collect information about the affected objects and contact technical support.

### Before you begin

- You must be signed in to the Grid Manager using a [supported web browser](#).
- You have [specific access permissions](#).
- You must have the `Passwords.txt` file.

### About this task

The **Objects lost** alert indicates that StorageGRID believes that there are no copies of an object in the grid. Data might have been permanently lost.

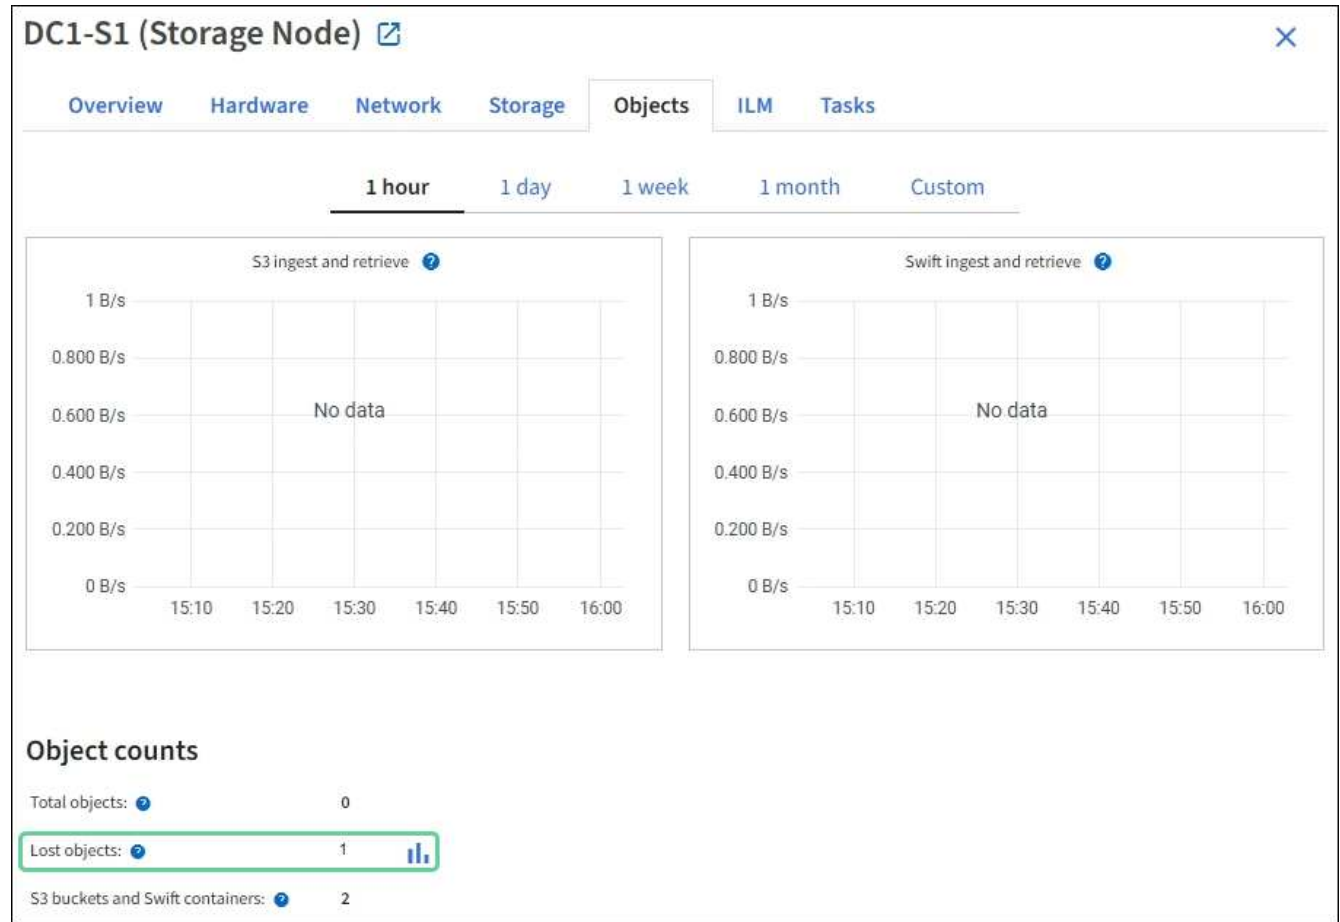

Investigate lost object alerts immediately. You might need to take action to prevent further data loss. In some cases, you might be able to restore a lost object if you take prompt action.

### Steps

1. Select **NODES**.

2. Select **Storage Node > Objects**.
3. Review the number of Lost objects shown in the Object counts table.

This number indicates the total number of objects this grid node detects as missing from the entire StorageGRID system. The value is the sum of the Lost objects counters of the Data store component within the LDR and DDS services.

4. From an Admin Node, [access the audit log](#) to determine the unique identifier (UUID) of the object that triggered the **Objects lost** alert:
  - a. Log in to the grid node:
    - i. Enter the following command: `ssh admin@grid_node_IP`
    - ii. Enter the password listed in the `Passwords.txt` file.
    - iii. Enter the following command to switch to root: `su -`
    - iv. Enter the password listed in the `Passwords.txt` file. When you are logged in as root, the prompt changes from `$` to `#`.
  - b. Change to the directory where the audit logs are located. Enter: `cd /var/local/log/`
  - c. Use `grep` to extract the Object Lost (OLST) audit messages. Enter: `grep OLST audit_file_name`
  - d. Note the UUID value included in the message.

```
>Admin: # grep OLSST audit.log
2020-02-12T19:18:54.780426
[AUDT:[CBID(UI64):0x38186FE53E3C49A5][UUID(CSTR):926026C4-00A4-449B-
AC72-BCCA72DD1311]
[PATH(CSTR):"source/cats"][NOID(UI32):12288733][VOLI(UI64):3222345986
][RSLT(FC32):NONE][AVER(UI32):10]
[ATIM(UI64):1581535134780426][ATYP(FC32):OLST][ANID(UI32):12448208][A
MID(FC32):ILMX][ATID(UI64):7729403978647354233]]
```

5. Use the `ObjectByUUID` command to find the object by its identifier (UUID), and then determine if data is at risk.
  - a. Telnet to localhost 1402 to access the LDR console.
  - b. Enter: `/proc/OBRP/ObjectByUUID UUID_value`

In this first example, the object with UUID 926026C4-00A4-449B-AC72-BCCA72DD1311 has two locations listed.

```
ade 12448208: /proc/OBRP > ObjectByUUID 926026C4-00A4-449B-AC72-
BCCA72DD1311

{
  "TYPE(Object Type)": "Data object",
  "CHND(Content handle)": "926026C4-00A4-449B-AC72-BCCA72DD1311",
  "NAME": "cats",
  "CBID": "0x38186FE53E3C49A5",
  "PHND(Parent handle, UUID)": "221CABD0-4D9D-11EA-89C3-

    },
    "AWS3": {
      "LOCC": "us-east-1"
    }
  }
}
```

c. Review the output of `/proc/OBRP/ObjectByUUID`, and take the appropriate action:

Metadata	Conclusion
No object found ("ERROR": "" )	<p>If the object is not found, the message "ERROR": "" is returned.</p> <p>If the object is not found, you can reset the count of <b>Objects lost</b> to clear the alert. The lack of an object indicates that the object was intentionally deleted.</p>
Locations > 0	<p>If there are locations listed in the output, the <b>Objects lost</b> alert might be a false positive.</p> <p>Confirm that the objects exist. Use the Node ID and filepath listed in the output to confirm that the object file is in the listed location.</p> <p>(The procedure for <a href="#">searching for potentially lost objects</a> explains how to use the Node ID to find the correct Storage Node.)</p> <p>If the objects exist, you can reset the count of <b>Objects lost</b> to clear the alert.</p>
Locations = 0	<p>If there are no locations listed in the output, the object is potentially missing. You can try to <a href="#">search for and restore the object</a> yourself, or you can contact technical support.</p> <p>Technical support might ask you to determine if there is a storage recovery procedure in progress. See the information about <a href="#">restoring object data using Grid Manager</a> and <a href="#">restoring object data to a storage volume</a>.</p>

## Search for and restore potentially lost objects

It might be possible to find and restore objects that have triggered a Lost Objects (LOST) alarm and a **Object lost** alert and that you have identified as potentially lost.

### Before you begin

- You have the UUID of any lost object, as identified in [Investigate lost objects](#).
- You have the `Passwords.txt` file.

### About this task

You can follow this procedure to look for replicated copies of the lost object elsewhere in the grid. In most cases, the lost object will not be found. However, in some cases, you might be able to find and restore a lost replicated object if you take prompt action.

Contact technical support for assistance with this procedure.

### Steps

1. From an Admin Node, search the audit logs for possible object locations:
  - a. Log in to the grid node:

- i. Enter the following command: `ssh admin@grid_node_IP`
  - ii. Enter the password listed in the `Passwords.txt` file.
  - iii. Enter the following command to switch to root: `su -`
  - iv. Enter the password listed in the `Passwords.txt` file. When you are logged in as root, the prompt changes from `$` to `#`.
- b. Change to the directory where the audit logs are located: `cd /var/local/log/`
  - c. Use `grep` to extract the [audit messages associated with the potentially lost object](#) and send them to an output file. Enter: `grep uuid-valueaudit_file_name > output_file_name`

For example:

```
Admin: # grep 926026C4-00A4-449B-AC72-BCCA72DD1311 audit.log >
messages_about_lost_object.txt
```

- d. Use `grep` to extract the Location Lost (LLST) audit messages from this output file. Enter: `grep LLST output_file_name`

For example:

```
Admin: # grep LLST messages_about_lost_objects.txt
```

An LLST audit message looks like this example message.

```
[AUDT:\[NOID\ (UI32\):12448208\] [CBIL (UI64):0x38186FE53E3C49A5]
[UUID (CSTR):"926026C4-00A4-449B-AC72-BCCA72DD1311"] [LTYP (FC32):CLDI]
[PCLD\ (CSTR\):"/var/local/rangedb/1/p/17/11/00rH0%DkRs&LgA%\#3tN6"\]
[TSRC (FC32):SYST] [RSLT (FC32):NONE] [AVER (UI32):10] [ATIM (UI64):
1581535134379225] [ATYP (FC32):LLST] [ANID (UI32):12448208] [AMID (FC32):CL
SM]
[ATID (UI64):7086871083190743409]]
```

- e. Find the PCLD field and the NOID field in the LLST message.

If present, the value of PCLD is the complete path on disk to the missing replicated object copy. The value of NOID is the node id of the LDR where a copy of the object might be found.

If you find an object location, you might be able to restore the object.

- f. Find the Storage Node associated with this LDR node ID. In the Grid Manager, select **SUPPORT > Tools > Grid topology**. Then select **Data Center > Storage Node > LDR**.

The Node ID for the LDR service is in the Node Information table. Review the information for each Storage Node until you find the one that hosts this LDR.

2. Determine if the object exists on the Storage Node indicated in the audit message:

- a. Log in to the grid node:
  - i. Enter the following command: `ssh admin@grid_node_IP`
  - ii. Enter the password listed in the `Passwords.txt` file.
  - iii. Enter the following command to switch to root: `su -`
  - iv. Enter the password listed in the `Passwords.txt` file.

When you are logged in as root, the prompt changes from `$` to `#`.

- b. Determine if the file path for the object exists.

For the file path of the object, use the value of `PCLD` from the LLST audit message.

For example, enter:

```
ls '/var/local/rangedb/1/p/17/11/00rH0%DkRs&LgA%#3tN6'
```

Always enclose the object file path in single quotes in commands to escape any special characters.

- If the object path is not found, the object is lost and can't be restored using this procedure. Contact technical support.
- If the object path is found, continue with the next step. You can attempt to restore the found object back to StorageGRID.

3. If the object path was found, attempt to restore the object to StorageGRID:

- a. From the same Storage Node, change the ownership of the object file so that it can be managed by StorageGRID. Enter: `chown ldr-user:bycast 'file_path_of_object'`
- b. Telnet to localhost 1402 to access the LDR console. Enter: `telnet 0 1402`
- c. Enter: `cd /proc/STOR`
- d. Enter: `Object_Found 'file_path_of_object'`

For example, enter:

```
Object_Found '/var/local/rangedb/1/p/17/11/00rH0%DkRs&LgA%#3tN6'
```

Issuing the `Object\_Found` command notifies the grid of the object's location. It also triggers the active ILM policies, which make additional copies as specified in each policy.

If the Storage Node where you found the object is offline, you can copy the object to any Storage Node that is online. Place the object in any `/var/local/rangedb` directory of the online Storage Node. Then, issue the `Object\_Found` command using that file path to the object.

- If the object can't be restored, the `Object\_Found` command fails. Contact technical support.

- If the object was successfully restored to StorageGRID, a success message appears. For example:

```
ade 12448208: /proc/STOR > Object_Found
'/var/local/rangedb/1/p/17/11/00rH0%DkRs&LgA%#3tN6'

ade 12448208: /proc/STOR > Object found succeeded.
First packet of file was valid. Extracted key: 38186FE53E3C49A5
Renamed '/var/local/rangedb/1/p/17/11/00rH0%DkRs&LgA%#3tN6' to
'/var/local/rangedb/1/p/17/11/00rH0%DkRt78Ila#3udu'
```

Continue with the next step.

4. If the object was successfully restored to StorageGRID, verify that new locations were created.

- a. Enter: `cd /proc/OBRP`
- b. Enter: `ObjectByUUID UUID_value`

The following example shows that there are two locations for the object with UUID 926026C4-00A4-449B-AC72-BCCA72DD1311.

```
ade 12448208: /proc/OBRP > ObjectByUUID 926026C4-00A4-449B-AC72-
BCCA72DD1311

{
  "TYPE(Object Type)": "Data object",

    "LOCC": "us-east-1"
  }
},
"CLCO\ (Locations\)": \[
  \{
    "Location Type": "CLDI\ (Location online\)",
    "NOID\ (Node ID\)": "12448208",
    "VOL I\ (Volume ID\)": "3222345473",
    "Object File Path":
"/var/local/rangedb/1/p/17/11/00rH0%DkRt78Ila\#3udu",
    "LTIM\ (Location timestamp\)": "2020-02-
12T19:36:17.880569"
  },
  \{
    "Location Type": "CLDI\ (Location online\)",
    "NOID\ (Node ID\)": "12288733",
    "VOL I\ (Volume ID\)": "3222345984",
    "Object File Path":
"/var/local/rangedb/0/p/19/11/00rH0%DkRt78Rrb\#3s;L",
    "LTIM\ (Location timestamp\)": "2020-02-
12T19:36:17.934425"
  }
]
}

```

c. Sign out of the LDR console. Enter: `exit`

5. From an Admin Node, search the audit logs for the ORLM audit message for this object to confirm that information lifecycle management (ILM) has placed copies as required.

a. Log in to the grid node:

i. Enter the following command: `ssh admin@grid_node_IP`

ii. Enter the password listed in the `Passwords.txt` file.

iii. Enter the following command to switch to root: `su -`

iv. Enter the password listed in the `Passwords.txt` file. When you are logged in as root, the prompt changes from `$` to `#`.

b. Change to the directory where the audit logs are located: `cd /var/local/log/`

- c. Use `grep` to extract the audit messages associated with the object to an output file. Enter: `grep uuid-valueaudit_file_name > output_file_name`

For example:

```
Admin: # grep 926026C4-00A4-449B-AC72-BCCA72DD1311 audit.log >
messages_about_restored_object.txt
```

- d. Use `grep` to extract the Object Rules Met (ORLM) audit messages from this output file. Enter: `grep ORLM output_file_name`

For example:

```
Admin: # grep ORLM messages_about_restored_object.txt
```

An ORLM audit message looks like this example message.

```
[AUDT:[CBID(UI64):0x38186FE53E3C49A5][RULE(CSTR):"Make 2 Copies"]
[STAT(FC32):DONE][CSIZ(UI64):0][UUID(CSTR):"926026C4-00A4-449B-AC72-
BCCA72DD1311"]
[LOCS(CSTR):"**CLDI 12828634 2148730112**, CLDI 12745543 2147552014"]
[RSLT(FC32):SUCS][AVER(UI32):10][ATYP(FC32):ORLM][ATIM(UI64):15633982
30669]
[ATID(UI64):15494889725796157557][ANID(UI32):13100453][AMID(FC32):BCM
S]]
```

- e. Find the `LOCS` field in the audit message.

If present, the value of `CLDI` in `LOCS` is the node ID and the volume ID where an object copy has been created. This message shows that the ILM has been applied and that two object copies have been created in two locations in the grid.

6. [Reset the lost and missing object counts](#) in the Grid Manager.

## Reset lost and missing object counts

After investigating the StorageGRID system and verifying that all recorded lost objects are permanently lost or that it is a false alarm, you can reset the value of the Lost Objects attribute to zero.

### Before you begin

- You must be signed in to the Grid Manager using a [supported web browser](#).
- You have [specific access permissions](#).

### About this task

You can reset the Lost Objects counter from either of the following pages:

- **SUPPORT > Tools > Grid topology > Site > Storage Node > LDR > Data Store > Overview > Main**
- **SUPPORT > Tools > Grid topology > Site > Storage Node > DDS > Data Store > Overview > Main**

These instructions show resetting the counter from the **LDR > Data Store** page.

### Steps

1. Select **SUPPORT > Tools > Grid topology**.
2. Select **Site > Storage Node > LDR > Data Store > Configuration** for the Storage Node that has the **Objects lost** alert or the LOST alarm.
3. Select **Reset Lost Objects Count**.

4. Click **Apply Changes**.

The Lost Objects attribute is reset to 0 and the **Objects lost** alert and the LOST alarm clear, which can take a few minutes.

5. Optionally, reset other related attribute values that might have been incremented in the process of identifying the lost object.
  - a. Select **Site > Storage Node > LDR > Erasure Coding > Configuration**.
  - b. Select **Reset Reads Failure Count** and **Reset Corrupt Copies Detected Count**.
  - c. Click **Apply Changes**.
  - d. Select **Site > Storage Node > LDR > Verification > Configuration**.
  - e. Select **Reset Missing Objects Count** and **Reset Corrupt Objects Count**.
  - f. If you are confident that quarantined objects aren't required, you can select **Delete Quarantined Objects**.

Quarantined objects are created when background verification identifies a corrupt replicated object copy. In most cases StorageGRID automatically replaces the corrupt object, and it is safe to delete the quarantined objects. However, if the **Objects lost** alert or the LOST alarm is triggered, technical support might want to access the quarantined objects.

- g. Click **Apply Changes**.

It can take a few moments for the attributes to reset after you click **Apply Changes**.

IN NO EVENT SHALL NETAPP BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

NetApp reserves the right to change any products described herein at any time, and without notice. NetApp assumes no responsibility or liability arising from the use of products described herein, except as expressly agreed to in writing by NetApp. The use or purchase of this product does not convey a license under any patent rights, trademark rights, or any other intellectual property rights of NetApp.

The product described in this manual may be protected by one or more U.S. patents, foreign patents, or pending applications.

LIMITED RIGHTS LEGEND: Use, duplication, or disclosure by the government is subject to restrictions as set forth in subparagraph (b)(3) of the Rights in Technical Data -Noncommercial Items at DFARS 252.227-7013 (FEB 2014) and FAR 52.227-19 (DEC 2007).

Data contained herein pertains to a commercial product and/or commercial service (as defined in FAR 2.101) and is proprietary to NetApp, Inc. All NetApp technical data and computer software provided under this Agreement is commercial in nature and developed solely at private expense. The U.S. Government has a non-exclusive, non-transferrable, nonsublicensable, worldwide, limited irrevocable license to use the Data only in connection with and in support of the U.S. Government contract under which the Data was delivered. Except as provided herein, the Data may not be used, disclosed, reproduced, modified, performed, or displayed without the prior written approval of NetApp, Inc. United States Government license rights for the Department of Defense are limited to those rights identified in DFARS clause 252.227-7015(b) (FEB 2014).
