Restoring the WFA database using REST APIs

You can restore the OnCommand Workflow Automation (WFA) database by using REST APIs. You cannot use the command-line interface (CLI) to restore the WFA database during a failover.

The following are the two types of restore:

- · Full restore
- · Regular restore

Restore (full) the WFA database using REST APIs

You can do a full restore of the OnCommand Workflow Automation (WFA) database by using REST APIs. In a full restore, you can restore the WFA database, WFA configuration, and key.

What you'll need

- You must have created a .zip backup of the WFA database.
- You must have admin or architect credentials.
- If you are restoring the database as a part of the migration procedure, you must do a full restore.

Steps

1. Enter the following URL in the REST client browser:

```
https://IP address of WFA server/rest/backups?full=true
```

- 2. In the Backup window, select the POST method.
- 3. In the Part drop-down list, select Multipart Body.
- 4. In the **File** field, enter the following information:
 - a. In the Content type drop-down list, select multi-part/form-data.
 - b. In the Charset drop-down list, select ISO-8859-1.
 - c. In the File name field, enter the name of the backup file you created and that you want to restore.
 - d. Click Browse.
 - e. Select the location of the .zip backup file.
- 5. Navigate to the WFA install location\wfa\bin directory, and restart the WFA services:
- 6. Restart the NetApp WFA Database and NetApp WFA Server service:

```
wfa --restart
```

7. Verify that the restore operation is successful and WFA is accessible.

Restore (regular) the WFA database using REST APIs

You can do a regular restore of the OnCommand Workflow Automation (WFA) database by using REST APIs. In a regular restore, you can only restore the WFA database.

What you'll need

- You must have created a .zip backup of the WFA database.
- · You must have admin or architect credentials.
- If you are restoring the database as a part of the migration procedure, you must do a full restore.

Steps

1. Enter the following URL in the REST client browser:

```
https://IP address of WFA server/rest/backups
```

- 2. In the Backup window, select the **POST** method.
- 3. In the Part drop-down list, select Multipart Body.
- 4. In the **File** field, enter the following information:
 - a. In the Content type drop-down list, select multi-part/form-data.
 - b. In the Charset drop-down list, select ISO-8859-1.
 - c. In the File namefield, enter the name of the backup file as backupFile.
 - d. Click Browse.
 - e. Select the location of the .zip backup file.
- Navigate to the WFA install location\wfa\bin directory, and restart the WFA services:
- 6. Verify that the restore operation is successful and WFA is accessible.
