

使用集群模式 Data ONTAP 与 SnapVault 系列 Snap Creator Framework

NetApp
August 04, 2021

使用集群模式 Data ONTAP 与 SnapVault 系统 1

使用集群模式 Data ONTAP `□□ SnapVault □系`

在`□□ SnapVault □系`之前，`□`需要定`□ SnapMirror 策略`。

1. `□`于`□行`集群模式 Data ONTAP 的存`□系`，`□`可以`□行`以下命令来`□□ SnapVault □系`。

```
hana::> snapmirror policy create -vserver hana2b -policy SV_HANA
hana::> snapmirror policy add-rule -vserver hana2b -policy SV_HANA
-snapmirror-label daily -keep 20
hana::> snapmirror policy add-rule -vserver hana2b -policy SV_HANA
-snapmirror-label hourly -keep 10

hana::> snapmirror policy show -vserver hana2b -policy SV_HANA

                Vserver: hana2b
SnapMirror Policy Name: SV_HANA
                Policy Owner: vserver-admin
                Tries Limit: 8
                Transfer Priority: normal
Ignore accesstime Enabled: false
Transfer Restartability: always
                Comment: -
                Total Number of Rules: 2
                Total Keep: 8
                Rules: Snapmirror-label  Keep  Preserve  Warn
                -----  ----  -----  ----
                        daily            20   false      0
                        hourly           10   false      0
```

策略必`□`包含 Snap Creator 配置中使用的所有保留`□ (□□)`的`□□`。上述命令`□`示了如何`□建``□用 SnapMirror 策略 SV_HANA`

2. 要在`□□`集群的集群控制台上`□建`和`□□ SnapVault □系`，`□□`行以下命令。

```
hana::> snapmirror create -source-path hanala:hana_data -destination
-path
hana2b:backup_hana_data -type XDP -policy SV_HANA
Operation succeeded: snapmirror create the relationship with destination
hana2b:backup_hana_data.

hana::> snapmirror initialize -destination-path hana2b:backup_hana_data
-type XDP
```
