TR-4997：使用vVols在 VCF 中部署和保護 Oracle RAC

Allen Cao、Niyaz Mohamed，NetApp

此解決方案概述並詳細介紹了 VMware Cloud Foundation (VCF) 中的 Oracle 部署和保護，其中 vSphere Virtual Volumes (vVols) 作為主資料庫存儲，Oracle 資料庫採用 Real Application Clusters (RAC) 配置。

目的

VMware vSphere 虛擬磁碟區 (vVols) 是一個 SAN/NAS 管理和整合框架，它將虛擬磁碟作為本機儲存物件公開，並在虛擬磁碟層級支援基於陣列的操作。換句話說，vVols使 SAN/NAS 設備能夠感知虛擬機，並能夠以虛擬機為中心的方式在單一虛擬磁碟的粒度上利用基於陣列的資料服務。vVols使客戶能夠利用其當前儲存投資的獨特功能，並在不中斷的情況下過渡到針對跨所有儲存類型的虛擬環境優化的更簡單、更有效率的營運模式。

在 "[TR-4996](#)"，我們示範了使用vVols在 VCF 中部署和保護單一實例 Oracle 資料庫。本文檔示範如何在 VMware Cloud Foundation 環境中部署和保護 Oracle RAC 資料庫，並使用vVols作為NetApp ONTAP 儲存叢集中的主要資料庫儲存。Oracle RAC 資料庫的配置就像部署在本機儲存系統上的本機檔案系統一樣。本技術報告重點介紹在 VCF 中為 Oracle RAC 部署建立vVols的步驟。我們也示範了使用NetApp自動化工具包在vVols上的 VCF 中部署 Oracle RAC 資料庫，以及使用NetApp SnapCenter UI 工具進行 RAC 資料庫保護。

此解決方案適用於以下用例：

- 在 VCF 中部署 Oracle RAC 資料庫，並使用NetApp ONTAP AFF上的vVols資料儲存作為主資料庫存儲
- 使用NetApp SnapCenter UI 工具在 VCF 中使用vVols資料儲存區備份和還原 Oracle 資料庫

對象

此解決方案適用於以下人群：

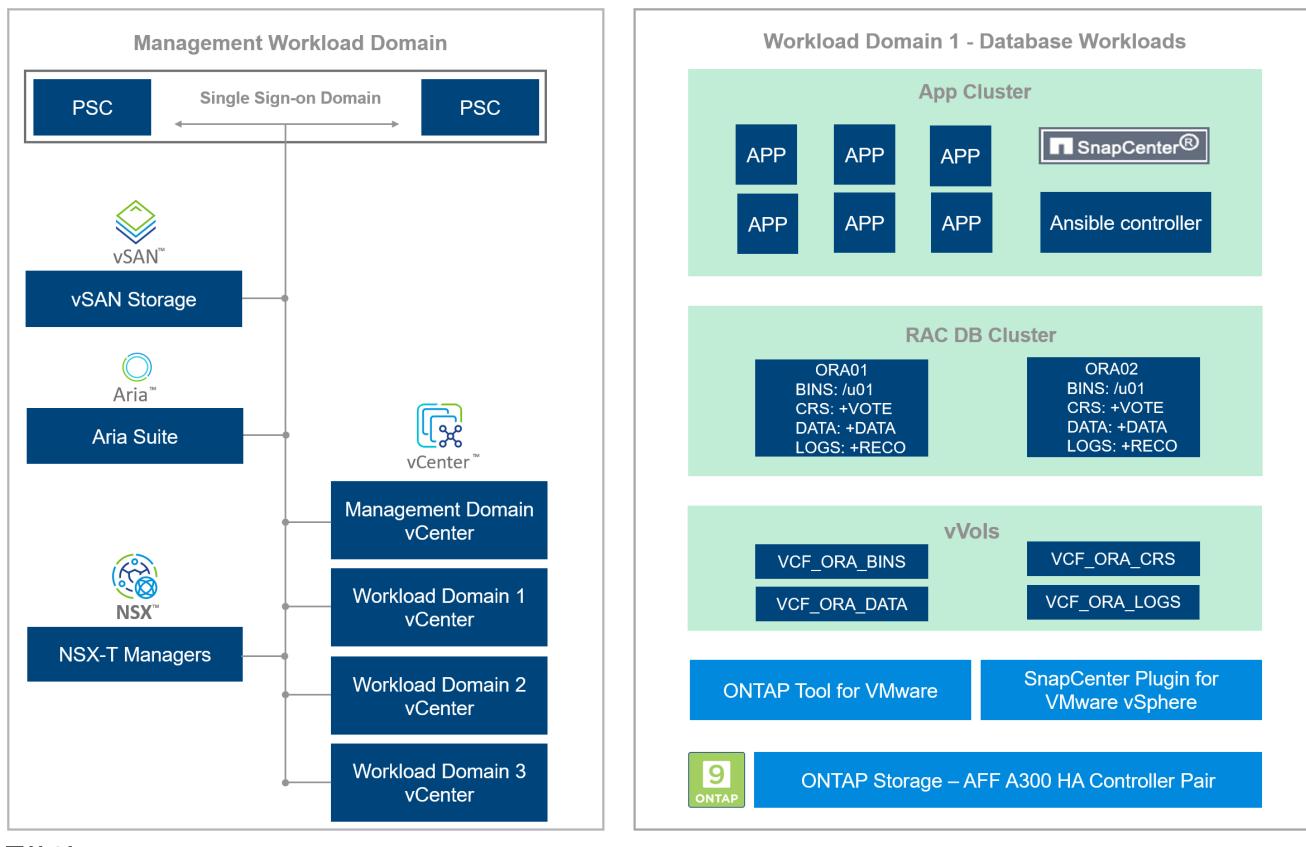

- 一位 DBA 希望在 VCF 中部署 Oracle RAC，並使用NetApp ONTAP AFF上的vVols資料儲存作為主資料庫存儲
- 一位資料庫解決方案架構師，希望使用NetApp ONTAP AFF儲存上的vVols資料儲存在 VCF 中測試 Oracle RAC 工作負載
- 一位儲存管理員希望在NetApp ONTAP AFF儲存上使用vVols資料儲存部署到 VCF 的 Oracle RAC 資料庫並進行管理
- 希望使用 vVol 資料儲存在 VCF 中建立 Oracle RAC 資料庫的應用程式擁有者

解決方案測試和驗證環境

此解決方案的測試和驗證是在 VCF 的實驗室環境中進行的，其中vVols資料儲存在NetApp ONTAP AFF儲存上，可能與最終部署環境不符。有關更多信息，請參閱[\[部署考慮的關鍵因素\]](#)。

架構

Oracle RAC Database Deployment and Protection in VCF with vVols

NetApp

硬體和軟體組件

硬體		
NetApp ONTAP AFF A300	版本 9.14.1P4	DS224 磁碟架，配備 24 個 NVMe 磁碟，總容量 35.2 TiB
VMware VSphere 集群	版本 8.02	12 個 CPU x Intel® Xeon® Gold 5218 CPU @ 2.30GHz，8 個節點（4 個管理域和 4 個工作負載域）
軟體		
紅帽Linux	RHEL-8.6, 4.18.0-372.9.1.el8.x86_64 內核	託管 Oracle DB 伺服器，部署 RedHat 訂閱進行測試
Windows 伺服器	2022 標準版，10.0.20348 內部版本 20348	託管 SnapCenter 伺服器
Centos Linux	CentOS Linux 版本 8.5.2111	託管 Ansible 控制器
Oracle 網格基礎架構	版本 19.18	已套用 RU 補丁 p34762026_190000_Linux-x86-64.zip

Oracle 資料庫	版本 19.18	已套用RU補丁p34765931_190000_Linux-x86-64.zip
Oracle OPatch	版本 12.2.0.1.36	最新補丁p6880880_190000_Linux-x86-64.zip
SnapCenter伺服器	版本 6.0	工作小組部署
SnapCenter Plug-in for VMware vSphere	版本 6.0	作為 OVA 虛擬機器部署到 vSphere 集群
適用於 VMware vSphere 的ONTAP 工具	版本 9.13	作為 OVA 虛擬機器部署到 vSphere 集群
開啟 JDK	版本 java-11-openjdk-11.0.23.0.9-3.el8.x86_64	資料庫虛擬機器上的SnapCenter插件要求

VCF中的Oracle RAC資料庫配置

RAC 節點	資料庫	資料庫儲存
ora01	NTAP(NTAP_pdb1,NTAP_pdb2,NTAP_pdb3)	NetApp ONTAP AFF A300 上的vVols資料儲存區 (VCF_ORA_BINS、VCF_ORA_CRS、VCF_ORA_DAT1、VCF_ORA_DAT2、VCF_ORA_LOGS)
ora02	NTAP(NTAP_pdb1,NTAP_pdb2,NTAP_pdb3)	NetApp ONTAP AFF A300 上的vVols資料儲存區 (VCF_ORA_BINS、VCF_ORA_CRS、VCF_ORA_DAT1、VCF_ORA_DAT2、VCF_ORA_LOGS)

部署考慮的關鍵因素

- * vVols到ONTAP集群連線的協定。 * NFS 或 iSCSI 都是不錯的選擇。性能水平相當。在此解決方案示範中，我們使用 iSCSI 作為vVols連接到下劃線ONTAP儲存叢集的儲存協定。如果 VCF 基礎架構支持， NetApp ONTAP 上的vVols資料儲存也支援 FC/FCoE、NVMe/FC 協定。
- vVols資料儲存上的 Oracle 儲存佈局。 *在我們的測試和驗證中，我們為 Oracle 二進位檔案、Oracle 叢集註冊表/投票、Oracle 資料和 Oracle 日誌檔案部署了五個vVols資料儲存區。將不同類型的 Oracle 檔案分離到各自的資料儲存體是一種很好的做法，這樣可以輕鬆管理和執行資料庫備份、復原或複製。為大型資料庫建立專用vVols，並為較小的資料庫或具有類似 QoS 設定檔的資料庫共用vVols。
- Oracle 儲存冗餘。使用 `Normal Redundancy` 用於關鍵的 Oracle RAC 叢集註冊表/投票文件，以便三個 ASM 磁碟故障群組上的三個投票文件提供最佳叢集保護，並且叢集註冊表在 ASM 磁碟故障群組之間鏡像。使用 `External Redundancy` 用於 Oracle 二進位檔案、資料檔案和日誌文件，以最佳化儲存使用率。帶下劃線的ONTAP RAID-DP 在以下情況下提供資料保護 `External Redundancy` 受僱。
- * ONTAP儲存驗證的憑證。 *僅使用ONTAP叢集級憑證進行ONTAP儲存叢集驗證，包括SnapCenter 與ONTAP儲存叢集的連線或ONTAP工具與ONTAP儲存叢集的連線。
- *從vVols資料儲存區到資料庫虛擬機器配置儲存。 *一次只能從vVols資料儲存到資料庫虛擬機器中新增一個磁碟。目前不支援同時從vVols資料儲存新增多個磁碟。

- *資料庫保護。* NetApp提供了用於資料庫備份和復原的SnapCenter software套件，並具有使用者友好的 UI 介面。NetApp建議實作這樣的管理工具來實現快速的 SnapShot 備份、快速的資料庫還原和復原。

解決方案部署

以下部分提供了在 Oracle RAC 配置中的NetApp ONTAP儲存上使用vVols資料儲存在 VCF 中部署 Oracle 19c 資料庫的逐步程序。

部署先決條件

部署需要以下先決條件。

1. VMware VCF 已設定。有關如何建立 VCF 的資訊或說明，請參閱 VMware 文檔 "[VMware 雲端基礎文檔](#)"。
2. 在 VCF 工作負載域中配置三個 Linux VM、兩個用於 Oracle RAC 資料庫叢集的 VM 和一個用於 Ansible 控制器的 VM。配置一個 Windows 伺服器 VM 以執行NetApp SnapCenter伺服器。有關設定 Ansible 控制器以自動部署 Oracle 資料庫的信息，請參閱以下資源 "[NetApp解決方案自動化入門](#)"。
3. Oracle RAC 資料庫虛擬機器應該至少配置兩個網路介面 - 一個用於 Oracle RAC 專用互連，一個用於應用程式或公共資料流量。
4. VMware vSphere 的SnapCenter外掛程式版本 6.0 已在 VCF 中部署。有關插件部署，請參考以下資源 : "["SnapCenter Plug-in for VMware vSphere文檔"](#)"。
5. VMware vSphere 的ONTAP工具已在 VCF 中部署。有關適用於 VMware vSphere 部署的ONTAP工具，請參閱下列資源 : "["ONTAP tools for VMware vSphere文檔"](#)"

請確定您已在 Oracle VM 根磁碟區中指派至少 50G，以便有足夠的空間儲存 Oracle 安裝檔案。

建立儲存能力設定檔

首先，為託管vVols資料儲存的下劃線ONTAP儲存建立自訂儲存功能設定檔。

1. 從vSphere用戶端捷徑開啟NetApp ONTAP工具。確保ONTAP儲存叢集已新增至`Storage Systems`作為ONTAP工具部署的一部分。

The screenshot shows the vSphere Client interface with the following sections:

- Shortcuts**: Hosts and Clusters, VMs and Templates, Storage, Networking, Content Libraries, Global Inventory Lists, Workload Management.
- Inventories**: Task Console, Event Console, VM Customization Specifications, VM Storage Policies, Host Profiles, Lifecycle Manager.
- Monitoring**: Task Console, Event Console, VM Customization Specifications, VM Storage Policies, Host Profiles, Lifecycle Manager.
- Plugins**: SnapCenter Plug-in for VMware vSphere, NetApp ONTAP tools (highlighted with a red box).
- Administration**: Licensing.

Below the main interface, a detailed view of the Storage Systems section is shown:

- Storage Systems** tab selected.
- Storage Systems** table:

Name	Type	IP Address	ONTAP Release	Status	Capacity	NFS VAAI	Supported Protocols
ntaphci-a300e9u25	Cluster	172.16.9.25	9.14.1	Normal	43.76%		
- Reports** section: Datastore Report, Virtual Machine Report, VVol Database Report, vVols Virtual Machine Report, Log Integrity Report.

2. 點選`Storage capability profile`為Oracle新增自訂設定檔。命名設定檔並新增簡短描述。

Storage Capability Profiles

Create

Name	Description
NetApp_AFF_A	Predefined profile
NetApp_AFF_C	Predefined profile
NetApp_ASA_A	Predefined profile

建立並配置vVols資料存儲

完成先決條件後，透過 vSphere 用戶端以管理員使用者身分登入 VCF，導覽至工作負載網域。不要使用內建 VMware 儲存選項來建立vVols。相反，使用NetApp ONTAP工具來建立vVols。下面示範了建立和配置vVols的過程。

1. vVols建立工作流程可以從ONTAP工具介面或 VCF 工作負載域叢集觸發。

The screenshot shows the 'ONTAP tools for VMware vSphere' dashboard. It features two main sections: 'Add Storage System' (with a green 'ADD' button) and 'Provision Datastore' (with a green 'PROVISION' button). A central message states: 'ONTAP tools for VMware vSphere is a vCenter Server plug-in that provides end-to-end lifecycle management for virtual machines in VMware environments using NetApp storage systems.' To the right, there's a 'Next Steps' section with 'View Dashboard' and 'Settings' options. Below the main dashboard, there's a 'What's new?' section and a 'Resources' section.

The screenshot shows the 'vcf-wkld-01-DC' datacenter details in the vSphere Client. The left sidebar shows a tree view of datacenters and hosts. The main pane displays 'Datacenter Details' with statistics: Hosts: 4, Virtual Machines: 17, Clusters: 1, Networks: 11, Datastores: 11. To the right, the 'Capacity and Usage' section shows CPU (8.2 GHz used), Memory (81.48 GB used), and Storage (495.63 GB used). A red box highlights the 'Provision Datastore' button at the bottom of the main pane.

2. 填寫資料儲存的一般信息，包括配置目標、類型、名稱和協定。

New Datastore

General

Specify the details of the datastore to provision. 

Provisioning destination:	vcf-wkid-01-DC	BROWSE
Type:	<input type="radio"/> NFS <input type="radio"/> VMFS <input checked="" type="radio"/> vVols

6. 為 Oracle 叢集註冊表或 CRS 建立資料儲存。

The screenshot shows the 'Storage attributes' configuration screen for a new datastore. The left sidebar lists steps 1 through 4. Step 3, 'Storage attributes', is selected. The main area displays two volumes: 'vcf_ora_crs1' and 'vcf_ora_crs2', both 25 GB in size, using the 'ASA_ORA' storage capability profile and assigned to the 'EHCAGgr01' and 'EHCAGgr02' aggregates respectively. A table below allows creating new volumes, showing columns for Name, Size(GB), Storage capability profile, Aggregates, and Space reserve. The 'Space reserve' dropdown is set to 'Thin'. Buttons at the bottom include 'CANCEL', 'BACK', and 'NEXT'.

您可以為vVols資料儲存區新增多個卷，或將vVols資料儲存區卷分佈在ONTAP控制器節點之間，以提高效能或實現冗餘。

7. 為 Oracle 資料建立資料儲存。理想情況下，在每個ONTAP控制器節點上建立單獨的資料存儲，並使用 Oracle ASM 在控制器節點之間對資料進行條帶化，以最大限度地利用ONTAP儲存叢集容量。

The screenshot shows the 'Storage attributes' configuration screen for a new datastore. The left sidebar lists steps 1 through 4. Step 3, 'Storage attributes', is selected. It shows one volume 'vcf_ora_dat1' of 200 GB using the 'ASA_ORA' storage capability profile and assigned to the 'EHCAGgr01' aggregate. A table below allows creating new volumes, showing columns for Name, Size(GB), Storage capability profile, Aggregates, and Space reserve. The 'Space reserve' dropdown is set to 'Thin'. A note at the bottom specifies the default storage capability profile as 'ASA ORA'. Buttons at the bottom include 'CANCEL', 'BACK', and 'NEXT'.

根據儲存能力設定檔建立虛擬機器儲存策略

在將儲存空間從vVols資料儲存配置到資料庫 VM 之前，請根據上一個步驟建立的儲存功能設定檔新增 VM 儲存策略。以下是具體步驟。

1. 從 vSphere Client 選單打開 Policies and Profiles，並突出顯示 `VM Storage Policies`。點選 `Create` 打開 `VM Storage Policies` 工作流程。

The screenshot shows the vSphere Client interface with the title bar "vSphere Client". In the top navigation bar, "Policies and Profiles" is selected, and "VM Storage Policies" is highlighted. On the left, a sidebar lists "VM Customization Specifications", "Host Profiles", "Compute Policies", and "Storage Policy Components". The main pane displays a table titled "VM Storage Policies" with a "CREATE" button at the top. A "Quick Filter" input field is present. The table lists several policies, including "vSAN Default Storage Policy" and "vVol No Requirements Policy". The status bar at the bottom right indicates "1 - 20 of 30 items".

2. 命名虛擬機器儲存策略。

The screenshot shows the "Edit VM Storage Policy" wizard. The left sidebar lists steps: 1. Name and description (selected), 2. Policy structure, 3. NetApp.clustered.Data.ONTAP.VP.vvol rules, 4. Storage compatibility, and 5. Review and finish. The main panel is titled "Name and description". It has fields for "Name" (containing "vVol_database") and "Description". At the bottom right are "CANCEL" and "NEXT" buttons.

3. 在 Datastore specific rules，查看 Enable rules for "NetAPP.clustered.Data.ONTAP.VP.vvol" storage

從vVols資料儲存體向 RAC VM 指派磁碟並配置 DB 存儲

從 vSphere 用戶端，透過編輯 VM 設定將vVols資料儲存中的所需磁碟新增至資料庫 VM。然後，登入 VM 格式化並將二進位磁碟掛載到掛載點 /u01。下面示範了具體的步驟和任務。

1. 在將磁碟從資料儲存分配到資料庫虛擬機器之前，請登入 VMware ESXi 主機進行驗證並確保在 ESXi 層級啟用了多寫入器（GBLAallowMW 值設定為 1）。

```
[root@vcf-wkld-esx01:~] which esxcli  
/bin/esxcli  
[root@vcf-wkld-esx01:~] esxcli system settings advanced list -o  
/VMFS3/GBLAallowMW  
Path: /VMFS3/GBLAallowMW  
Type: integer  
Int Value: 1  
Default Int Value: 1  
Min Value: 0  
Max Value: 1  
String Value:  
Default String Value:  
Valid Characters:  
Description: Allow multi-writer GBLs.  
Host Specific: false  
Impact: none  
[root@vcf-wkld-esx01:~]
```

2. 新增一個新的專用 SCSI 控制器以供 Oracle RAC 磁碟使用。停用 SCSI 總線共用。

VCF中的Oracle RAC部署

建議利用NetApp自動化工具包在具有vVols的 VCF 中部署 Oracle RAC。仔細閱讀隨附的說明（README），並按照工具包中的說明配置部署參數文件，例如部署目標文件 - hosts、全域變數文件 - vars/vars.yml 和本地 DB VM 變數檔案 - host_vars/host_name.yml。以下是逐步的程序。

1. 透過 ssh 以管理員使用者身分登入 Ansible 控制器 VM，並使用vVols複製用於在 VCF 中部署 Oracle RAC 的自動化工具包副本。

```
git clone https://bitbucket.ngage.netapp.com/scm/ns-
bb/na_oracle_deploy_rac.git
```

2. 將下列 Oracle 安裝檔案暫存於 RAC 節點 1 資料庫 VM 上的 /tmp/archive 資料夾中。該資料夾應允許所有使用者以 777 權限存取。

```

```

3. 在 Ansible 控制器和資料庫虛擬機器之間設定 ssh 無密鑰身份驗證，這需要產生 ssh 密鑰對並將公鑰複製到資料庫虛擬機器管理員用戶根目錄 .ssh 資料夾 authorized_keys 檔案中。

```
ssh-keygen
```

4. 設定使用者定義的目標主機參數檔。以下是目標主機檔案 hosts 的典型設定範例。

```
#Oracle hosts
[oracle]
ora01 ansible_host=10.61.180.21
ansible_ssh_private_key_file=ora01.pem
ora02 ansible_host=10.61.180.22
ansible_ssh_private_key_file=ora02.pem
```

5. 設定使用者定義的本機特定參數檔。以下是本機 host_name.yml 檔案 - ora01.yml 的典型設定範例。

```
# Binary lun
ora_bin: /dev/sdb

# Host DB configuration
ins_sid: "{{ oracle_sid }}1"
asm_sid: +ASM1
```

6. 配置使用者定義的全域參數檔。以下是全域參數檔 vars.yml 的典型配置範例

```
#####
## 
### ONTAP env specific config variables
## 
#####
# ONTAP storage platform: on-prem, vmware-vvols
ontap_platform: vmware-vvols

# Prerequisite to create five vVolss in VMware vCenter
# VCF_ORA_BINS - Oracle binary
# VCF_ORA CRS - Oracle cluster registry and vote
# VCF_ORA_DAT1 - Oracle data on node1
# VCF_ORA_DAT2 - Oracle data on node2
# VCF_ORA_LOGS - Oracle logs on node1 or node2

# Oracle disks are added to VM from vVols: 1 binary disk, 3 CRS
disks, 4 data disks, and 2 log disks.

```

- 從 Ansible 控制器，複製自動化工具包主目錄 /home/admin/na_oracle_deploy_rac，執行先決條件劇本來設定 ansible 先決條件。

```
ansible-playbook -i hosts 1-ansible_requirements.yml
```

8. 執行 Linux 配置劇本。

```
ansible-playbook -i hosts 2-linux_config.yml -u admin -e  
@vars/vars.yml
```

9. 執行 Oracle 部署劇本。

```
ansible-playbook -i hosts 4-oracle_config.yml -u admin -e  
@vars/vars.yml
```

10. 或者，上述所有劇本也可以透過單一劇本運行來執行。

```
ansible-playbook -i hosts 0-all_playbook.yml -u admin -e  
@vars/vars.yml
```

VCF 中的 Oracle RAC 部署驗證

本節提供有關 VCF 中的 Oracle RAC 部署驗證的詳細信息，以確保所有 Oracle RAC 資源都已完全部署、配置並按預期運行。

1. 以管理員使用者身分登入 RAC VM 以驗證 Oracle 網格基礎架構。

```
[admin@ora01 ~]$ sudo su
[root@ora01 admin]# su - grid

7. 或在成功執行劇本後登入 EM express 來驗證 RAC 資料庫。

The screenshot shows two consecutive pages from the Oracle Enterprise Manager Database Express interface.

Login Page: The URL is <https://10.61.180.21:5500/em/login>. It features a large blue header with the text "ORACLE ENTERPRISE MANAGER DATABASE EXPRESS". Below it is a circular logo with a cloud icon. The login form includes fields for "Username" (set to "system"), "Password" (redacted), "Container Name" (redacted), and a "Log In" button. At the bottom right is the ORACLE logo.

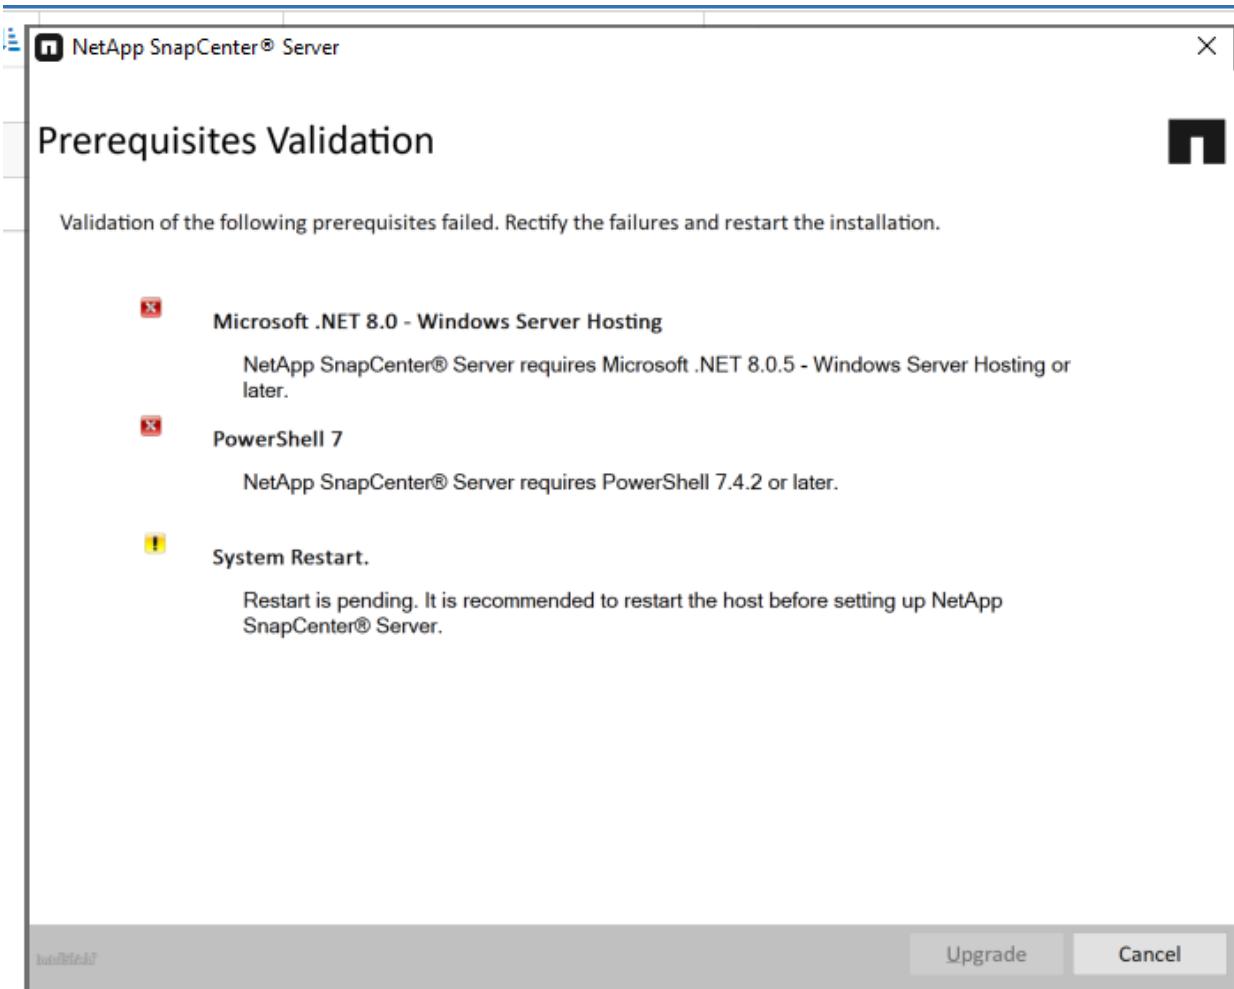

Performance Dashboard: The URL is <https://10.61.180.21:5500/em/shell>. This page displays various performance metrics. On the left, the "Status" section shows system details: Up Time (1 hours, 4 minutes, 16 seconds), Type (RAC - 2 Instance(s) up), CDB (3 PDB(s)), Version (19.8.0.0 Enterprise Edition), Platform Name (Linux x86 64-bit), Archiver Started, Last Backup Time (N/A), and Incident(s) (0). On the right, the "Performance" section includes a chart showing activity over time (Aug 16, 2024 GMT-04:00) and four stacked bar charts for Host CPU, Active Sessions, Memory, and Data Storage usage.

使用SnapCenter在 VCF 中備份和還原 Oracle RAC 資料庫

SnapCenter設定

SnapCenter版本 6 比版本 5 有許多功能增強，包括對 VMware vVols資料儲存的支援。 SnapCenter依賴資料庫虛擬機器上的主機端插件來執行應用程式感知的資料保護管理活動。有關適用於 Oracle 的NetApp SnapCenter插件的詳細信息，請參閱此文檔["您可以使用 Oracle 資料庫插件做什麼"](#)。下面提供了在 VCF 中設定SnapCenter版本 6 以進行 Oracle RAC 資料庫備份和復原的進階步驟。

1. 從NetApp支援網站下載SnapCenter software版本 6：["NetApp支援下載"](#)。
2. 以管理員身分登入託管 Windows VM 的SnapCenter。安裝SnapCenter 6.0 的先決條件。

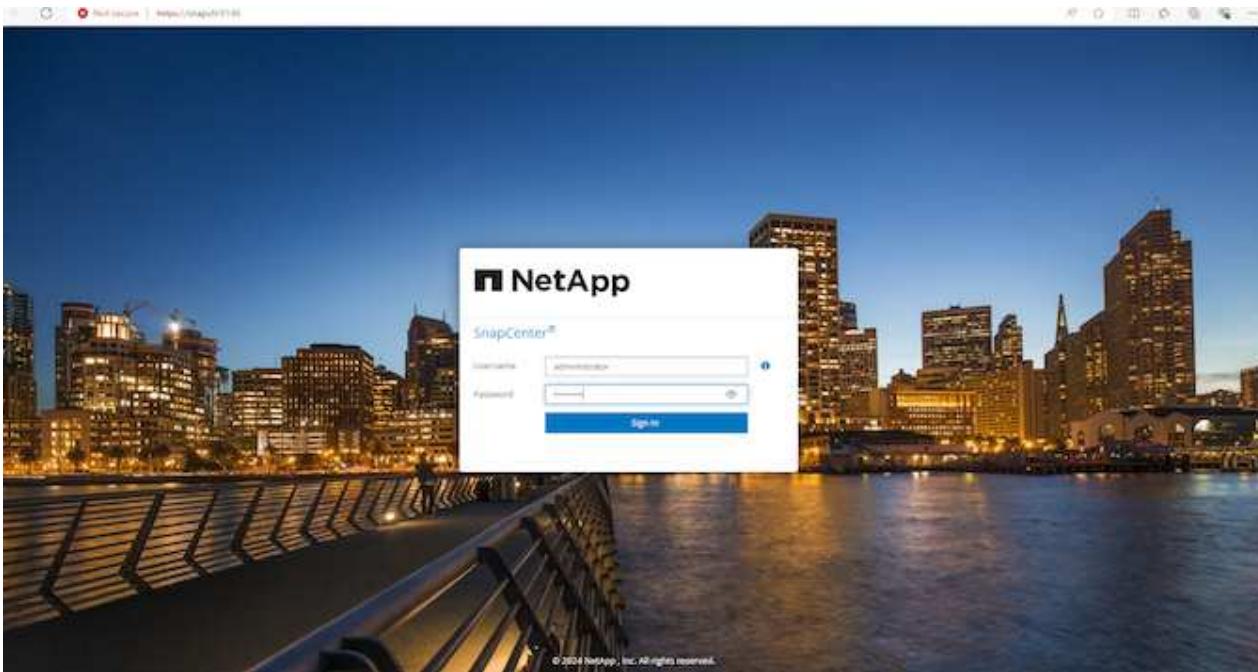

3. 以管理員身份安裝最新的 Java JDK["取得用於桌面應用程式的 Java"](#)。

如果 Windows 伺服器部署在網域環境中，請將網域使用者新增至SnapCenter伺服器本機管理員群組，並使用網域使用者執行SnapCenter安裝。

4. 以安裝使用者身分透過 HTTPS 連接埠 8846 登入SnapCenter UI 以設定SnapCenter for Oracle。

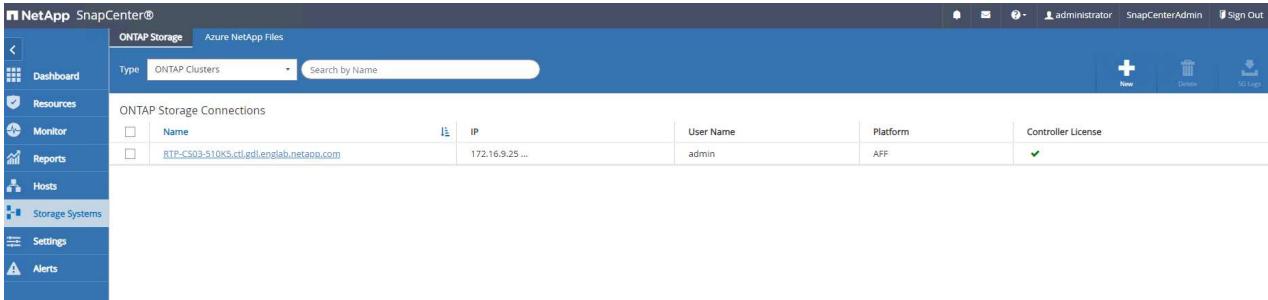

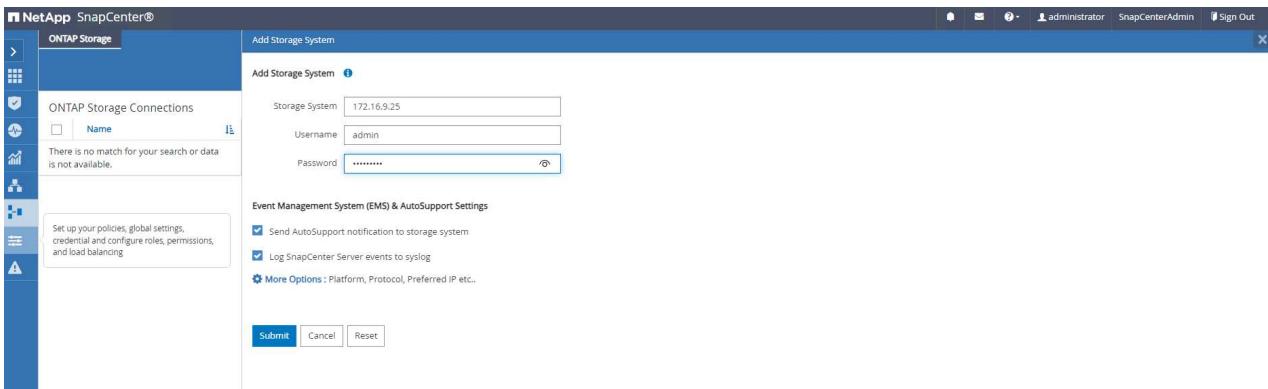

5. 審查 `Get Started` 如果您是新用戶，可以透過選單快速了解SnapCenter。

A screenshot of the NetApp SnapCenter interface. The left sidebar shows navigation options like Dashboard, Resources, Monitor, Reports, Hosts, Storage Systems, Settings, and Alerts. The main area has tabs for Status and Get Started, with Get Started being active. It displays a large ":(sad face icon. Below it, text says "Unable to connect to YouTube. You can use the playlist (https://www.youtube.com/playlist?list=PLdXl3bzJew7nofM6IN44eOe4aOsoryckg) to view the videos." To the right is a vertical sidebar titled "Get Started" with several items: Add storage connections and licensing, Configure user credentials, Add a host & install plug-ins, Create policies, Protect resources, Back up now, Restore a backup, Clone a backup, CA Certificate Settings, and Backup to Object Store. A "Learn more" button is at the bottom of this sidebar.

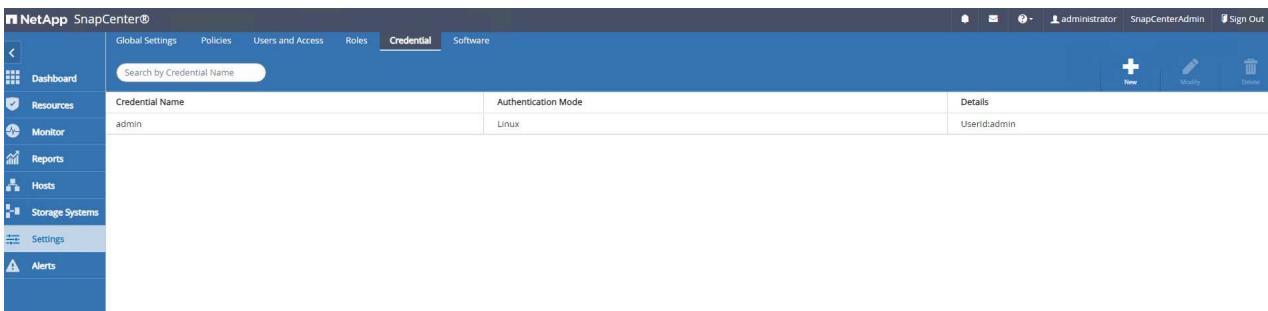

6. 更新 `Hypervisor Settings` 在全域設定中。

A screenshot of the NetApp SnapCenter Global Settings page. The left sidebar includes Storage Systems under the Settings category. The main content area shows "Global Settings" with a "Hypervisor Settings" section containing a checked checkbox for "VMs have iSCSI direct attached disks or NFS for all the hosts" and an "Update" button. Other sections include Notification Server Settings, Configuration Settings, Purge Jobs Settings, Domain Settings, CA Certificate Settings, Disaster Recovery, Audit log Settings, and Multi Factor Authentication (MFA) Settings.

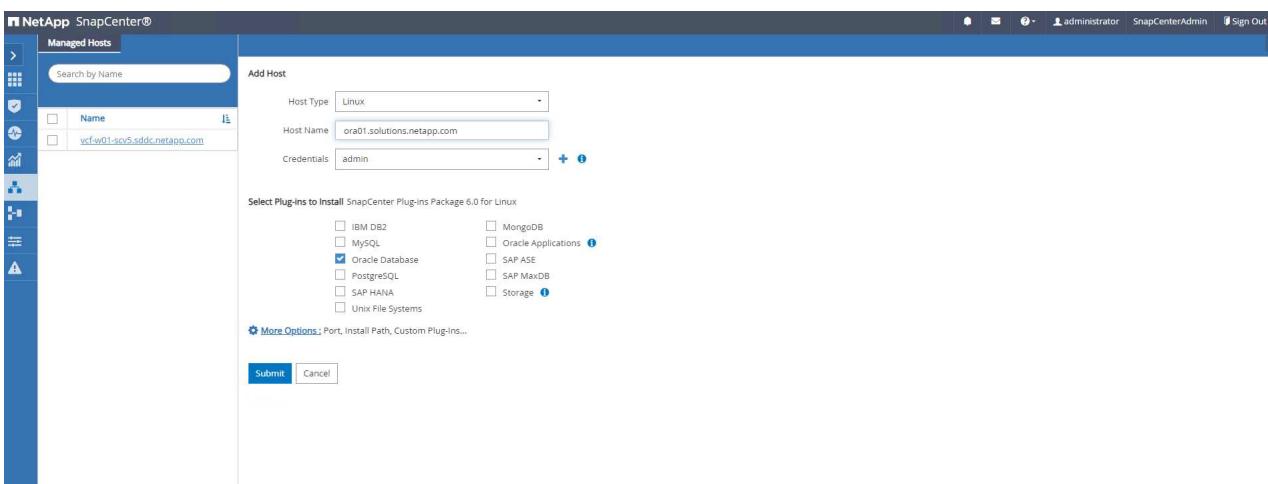

7. 將ONTAP儲存叢集新增至 `Storage Systems` 使用群集管理 IP 並透過群集管理員使用者 ID 進行身份驗證。

8. 新增 Oracle RAC 資料庫虛擬機器和 vSphere 插件虛擬機 `Credential` 用於 SnapCenter 存取 DB VM 和 vSphere 插件 VM。該憑證應在 Linux VM 上具有 sudo 權限。您可以為虛擬機器的不同管理使用者 ID 建立不同的憑證。vSphere 外掛程式虛擬機器管理使用者 ID 是在 vCenter 中部署插件虛擬機器時定義的。

9. 在 VCF 中新增 Oracle RAC 資料庫虛擬機 `Hosts` 使用上一個步驟中建立的 DB VM 憑證。

Confirm Fingerprint

Authenticity of the host cannot be determined i

Host name	Fingerprint	Valid
ora01.solutions.netapp.com	ssh-ed25519 256 FA:ED:C8:FC:C3:A3:95:6B:C8:BF:0A:C4:69:E6:FF:6A	

Confirm and Submit

Close

Confirm Fingerprint

Authenticity of the host cannot be determined i

Host name	Fingerprint	Valid
ora01.solutions.netapp.com	ssh-ed25519 256 FA:ED:C8:FC:C3:A3:95:6B:C8:BF:0A:C4:69:E6:FF:6A	✓
ora02.solutions.netapp.com	ssh-ed25519 256 FA:ED:C8:FC:C3:A3:95:6B:C8:BF:0A:C4:69:E6:FF:6A	

Confirm Others and Submit

Close

10. 類似地，將NetApp VMware 外掛程式 VM 新增至 `Hosts` 使用上一個步驟中建立的 vSphere 外掛程式 VM 憑證。

The screenshot shows two parts of the NetApp SnapCenter interface. The top part is a modal dialog titled 'Add Host' where 'Host Type' is set to 'vsphere', 'Host Name' is '172.21.166.143', and 'Credentials' are 'admin'. The bottom part is the main 'Managed Hosts' list, which includes entries for 'ora01.solutions.netapp.com', 'ora02.solutions.netapp.com', and 'vf001.svc6.vdrt.netapp.com'. The 'vf001' entry is highlighted.

11. 最後，在 DB VM 上發現 Oracle 資料庫後，回到 Settings-'Policies' 建立 Oracle 資料庫備份策略。理想情況下，建立單獨的存檔日誌備份策略，以允許更頻繁的備份間隔，從而最大限度地減少故障時的資料遺失。

The screenshot shows the NetApp SnapCenter interface. The top navigation bar includes Global Settings, Policies (selected), Users and Access, Roles, Credential, Software, administrator, SnapCenterAdmin, and Sign Out. The main content area is titled "Oracle Database" and shows a table of backup policies:

Name	Backup Type	Schedule Type	Replication	Verification
Oracle Archive Logs Backup	LOG, ONLINE	Hourly		
Oracle Online Full Backup	FULL, ONLINE	Hourly		

Below the table are buttons for New, Modify, Copy, Details, and Delete. The left sidebar has links for Dashboard, Resources, Monitor, Reports, Hosts, Storage Systems, Settings, and Alerts.

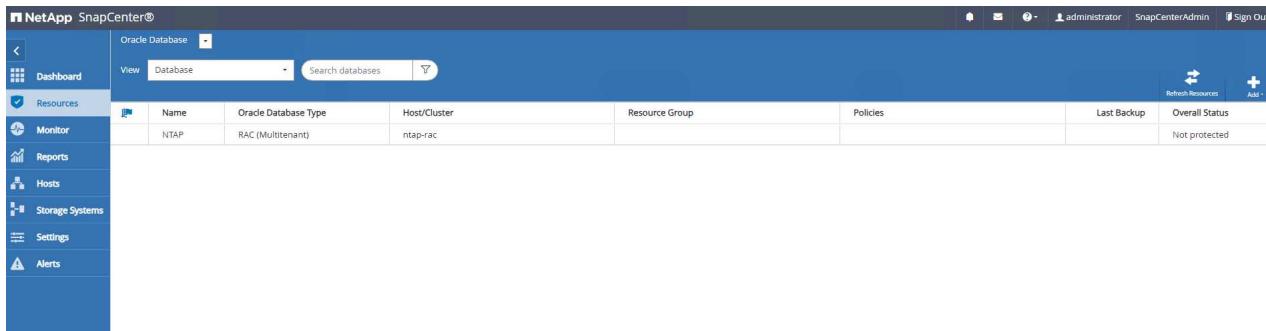

確保SnapCenter伺服器名稱可以解析為 DB VM 和 vSphere 插件 VM 的 IP 位址。同樣，DB VM 名稱和 vSphere 外掛程式 VM 名稱可以解析為SnapCenter伺服器的 IP 位址。

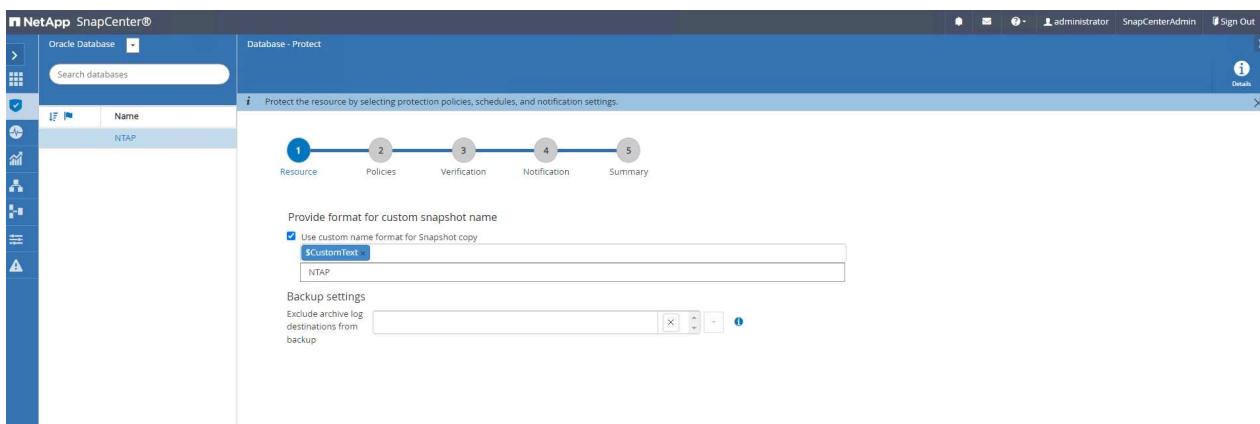

資料庫備份

與傳統的基於 RMAN 的方法相比， SnapCenter 利用ONTAP磁碟區快照實現更快的資料庫備份、復原或複製。由於資料庫在快照之前處於 Oracle 備份模式，因此快照與應用程式一致。

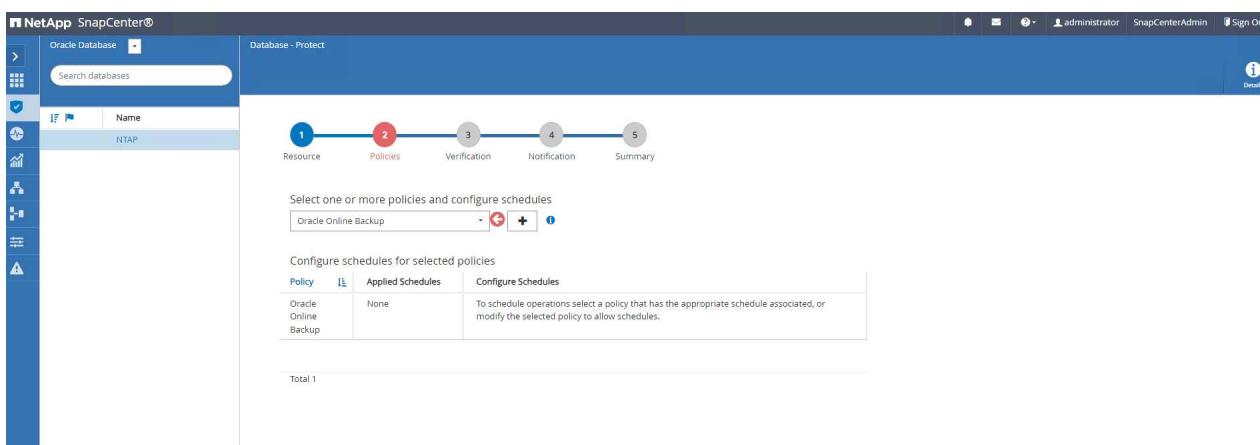

1. 從 Resources 選項卡，將 VM 新增至 SnapCenter 後，會自動發現 VM 上的任何資料庫。最初，資料庫狀態顯示為 `Not protected`。

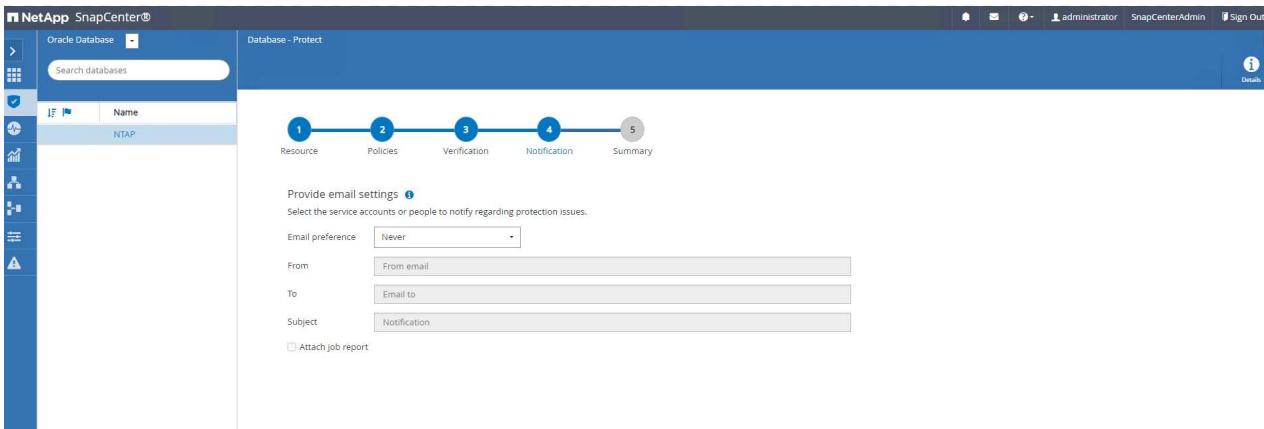

2. 按一下資料庫以啟動工作流程來啟用資料庫保護。

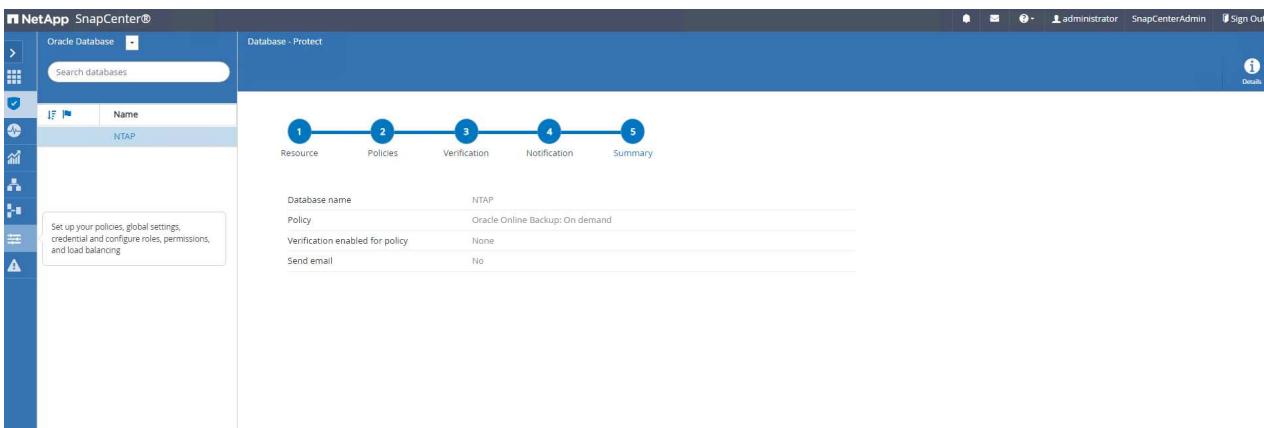

3. 如果需要，請套用備份策略並設定計劃。

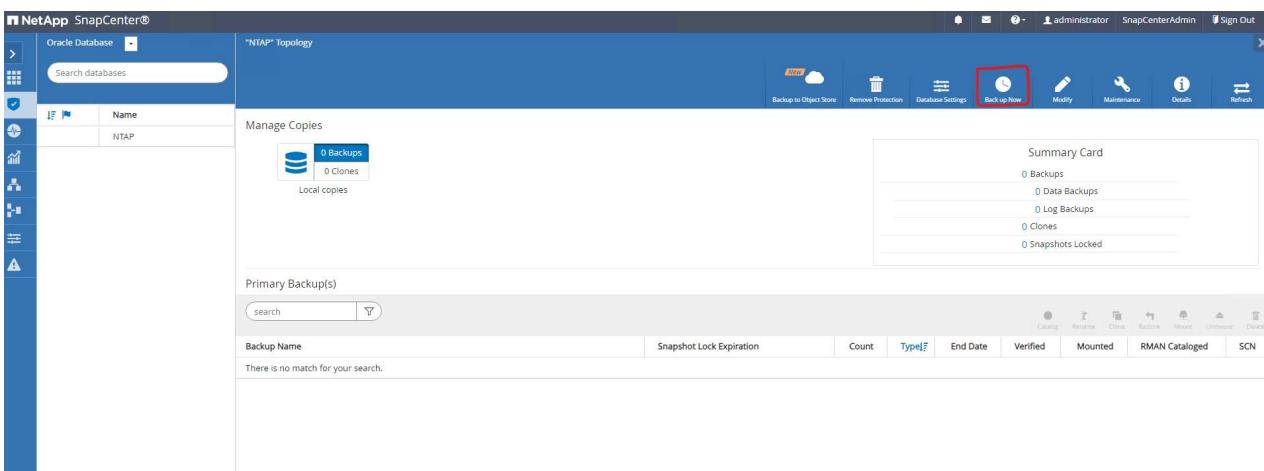

4. 如果需要，設定備份作業通知。

5. 查看摘要並完成以啟用資料庫保護。

6. 只需點擊即可觸發按需備份作業 Back up Now。

Backup

Create a backup for the selected resource

8. 按一下資料庫以查看 RAC 資料庫的已完成備份集。

The screenshot shows the NTAP1 Topology interface. At the top, there are navigation icons for 'Backup to Object Store', 'Remote Protection', 'Database Settings', 'Back-up Now', 'Modify', 'Maintenance', 'Details', and 'Refresh'. Below the header, a 'Manage Copies' section displays '4 Backups' and '1 Clone' under 'Local copies'. To the right is a 'Summary Card' showing statistics: 4 Backups, 2 Data Backups, 2 Log Backups, 1 Clone, and 0 Snapshots Locked. The main area is titled 'Primary Backup(S)' and contains a search bar and a table of backup details.

Backup Name	Snapshot Lock Expiration	Count	Type	End Date	Verified	Mounted	RMAN Cataloged	SCN
ora_01_07-18-2024_11.17.20.8165_1		1	Log	07/18/2024 11:17:55 AM	Not Applicable	False	Not Cataloged	2874360

資料庫還原/復原

SnapCenter為 Oracle RAC 資料庫提供了多種從快照備份中復原的選項。在此範例中，我們示範如何從較舊的快照備份進行恢復，然後將資料庫前滾到最後一個可用日誌。

- 首先，執行快照備份。然後，建立測試表並向表中插入一行，以驗證在建立測試表之前從快照映像還原的資料庫是否重新取得測試表。

```
[oracle@ora01 ~]$ sqlplus / as sysdba
